How to Use This Playbook

This playbook translates the three locked build specs (WF001 v1.2, WF002 v1.3, WF003 v1.1) into ordered, step-by-step QuickBase and FastField configuration instructions. It is a **build guide**, not a spec repeat — it tells you *how* to configure, not just *what* to configure.

How to work through it:

- **Phase 0** first — always. Pre-build setup must be complete before any table is created.
- **Phase 1** second — shared reference tables are dependencies for all three workflows. Build them once.
- **Phase 2, 3, 4** — build each workflow in order. WF003 can be built before WF002 if preferred (it is upstream), but WF001 is independent and can run in parallel.
- **Phase 5** last — cross-workflow wiring and end-to-end testing.

Key conventions:

- `Auto` fields are system-generated — never manual entry.
- `Required` fields must be set before the form can save.
- `Gate` fields are enforced by hard-stop validation — no bypass allowed.
- `Relationship` fields link to another table via QB relationship (never free-text for linked data).
- All field names, automation IDs, and gate IDs match the approved specs exactly. Do not rename.
- QB status fields (Workflow Stage, Lot Status, Asset Status, etc.) are **set by automation only** — Community Managers never manually set these fields.

Table of Contents

PHASE 0 — PRE-BUILD SETUP

P0-S1	Create QB Application
P0-S2	Provision User Accounts & Role Permissions

P0-S3	Provision FastField Account & Users
P0-S4	Naming Conventions & Record ID Formats
P0-S5	Source Files Reference

PHASE 1 — SHARED REFERENCE TABLES

P1-S1	Communities Table (68 records)
P1-S2	Lot Status Reference Table (16 values)
P1-S3	Asset Status Reference Table (25 values)
P1-S4	Lots Table

PHASE 2 — WF001: HOME ORDERING

P2-S1	Home Orders Table
P2-S2	Workflow Tasks Table
P2-S3	Delivery Records Table
P2-S4	Construction Inspection Records Table
P2-S5	Ops Readiness Records Table
P2-S6	Listing Records Table
P2-S7	Cascading Dropdown Configuration
P2-S8	QB Forms (10 forms)
P2-S9	FastField Form 1 — Home Delivery Confirmation
P2-S10	FastField Form 2 — Construction Inspection (89 Items)
P2-S11	FastField Form 3 — Ops & Sales Readiness (71 Items)
P2-S12	FastField Form 4 — Listing Form
P2-S13	Automations A1–A14
P2-S14	Lot Status Automations LS-1 – LS-6
P2-S15	Gate Rules HO-G1 – OI-G3
P2-S16	Views & Dashboards

PHASE 3 — WF002: REHAB

P3-S1	Rehab Records Table (RH)
P3-S2	Rehab Tasks Table (TK-RH)
P3-S3	Rehab Walkthrough Records Table (RW)
P3-S4	Vendors QB Reference Table + Power Automate Integration
P3-S5	FastField Form — Rehab Walkthrough Punchlist (37 Items)

P3-S6	Cascading Dropdowns (WF002)
P3-S7	Automations A-RH-01 – A-RH-12
P3-S8	Gate Rules G-RH-01 – G-RH-08

PHASE 4 — WF003: ASSET DISPOSITION REVIEW

P4-S1	Disposition Meetings Table (DM)
P4-S2	Disposition Items Table (DI)
P4-S3	Automations A-DR-01 – A-DR-05
P4-S4	Gate Rules G-DR-01 – G-DR-03
P4-S5	Standard Reports (5 reports)

PHASE 5 — CROSS-WORKFLOW CONNECTIONS & TESTING

P5-S1	WF003 → WF002 Integration Wire-Up
P5-S2	Move Out Integration Points
P5-S3	Shared Reference Table Dependencies Map
P5-S4	End-to-End Testing Checklists

PHASE 0

Pre-Build Setup

MUST BE COMPLETED BEFORE ANY TABLE IS CREATED

P0-S1 · Create QuickBase Application

STEP 1

Log in to QuickBase and create a new app

Go to **quickbase.com** → **My Apps** → **+ New App**. Select *Start from scratch*. Name the app exactly: `Parakeet Communities`. Leave the description blank or enter: *Operational workflow system — Home Ordering, Rehab, Asset Disposition Review.*

STEP 2

Set app icon and branding

In App Settings → Branding: set the app color to **#2F4E65** (navy). Upload the Parakeet logo (parakeet-communities-Logo-RGB.png).

STEP 3

Confirm app URL and share with build team

Copy the app URL (format: `https://parakeetcommunities.quickbase.com/db/[AppID]`). Share with all QB admins and the build team.

P0-S2 · Provision User Accounts & Role Permissions

¡ QB roles drive form visibility, field edit access, and automation permissions. Set these before building any forms.

STEP 1

Create all named user accounts

In App Settings → Users, invite each person below. Set role as indicated:

Name / Role	QB Role	Access Level
Austin (Owner / CEO)	System Admin	Full admin — all tables, all fields, approve gates
Justin (Asset Management / RM Admin)	Asset Management	Full Edit — all workflow tables
Melanie (Operations Coordinator)	Ops Coord	Edit — assigned tasks; read-only otherwise
John Clark (Director of Construction)	Construction	Full Edit — Construction Inspection, Delivery Records; read-only on financial fields
Facility Manager	Facility Manager	Edit — Ops Readiness Records; read-only otherwise
Sales / Community Managers	Community Manager	Edit — Home Orders (own records), Ops Readiness (own records)
Accounting	Accounting	Edit — financial fields only; read-only on workflow fields
Leslie (Listing Team)	Listing	Read-only — Home Orders, Listing Records only
Tanya (Listing Team)	Listing	Read-only — Home Orders, Listing Records only

P0-S3 · Provision FastField Account & Users

STEP 1

Create FastField organization account

Log in to FastField (fastfieldforms.com). Create or confirm the Parakeet Communities organization account. Confirm license tier supports webhook/API integration (required for QB sync).

STEP 2

Add FastField users

Add all field staff who will complete forms: Director of Construction (John Clark), Facility Managers, Community Managers / Sales Reps, Operations Coordinators.

STEP 3

Note the FastField webhook endpoint

In FastField → Settings → Integrations, locate the webhook configuration panel. Note the webhook URL format — you will configure this per-form in Phase 2 (FastField → QB sync).

P0-S4 · Naming Conventions & Record ID Formats

Record Type	ID Format	Example	Auto-Generated By
Home Orders (WF001)	HO-YYYY-###	HO-2026-001	QB formula field
Workflow Tasks (WF001)	TK-YYYY-#####	TK-2026-00001	QB formula field
Rehab Records (WF002)	RH-YYYY-###	RH-2026-001	QB formula on creation
Rehab Tasks (WF002)	TK-RH-YYYY-#####	TK-RH-2026-00001	QB formula field
Walkthrough Records (WF002)	RW-YYYY-###	RW-2026-001	QB formula on webhook receipt
Disposition Meetings (WF003)	DM-YYYY-###	DM-2026-001	QB formula field
Disposition Items (WF003)	DI-YYYY-###	DI-2026-001	QB formula field
Lot Status (ref)	LS-###	LS-001	QB formula field
Asset Status (ref)	AS-###	AS-001	QB formula field

> ¡ All auto-generated IDs use a QB formula field combining `"PREFIX-" & Text(Year(Today())) & "-" & Right("000" & [Record ID#], 3)` . Adjust padding zeros to match the format above.

P0-S5 · Source Files Reference

The following files are the build-phase source of truth. Keep them accessible during the build.

File	Contents	Use During Build
dw_PDS.xlsx	68 active communities (Reportable = Yes) — Short Name, Display Name, State, Vehicle, Type, Age Cat, Lots, Occupancy, Rent	Phase 1 — Communities table seed data
Unit Type Listing.xlsx	16 Lot Status values (RM-aligned) — exact status names, categories	Phase 1 — Lot Status reference table
Asset Status.xlsx	25 Asset Status values (RM-aligned) — exact status names, categories, descriptions	Phase 1 — Asset Status reference table
WF001 Spec v1.2	Home Ordering complete spec — 7 tables, 4 FastField forms, 20 automations, 9 gate rules	Phase 2 — all steps
WF002 Spec v1.3	Rehab complete spec — 5 tables, 1 FastField form, 12 automations, 8 gate rules	Phase 3 — all steps
WF003 Spec v1.1	Asset Disposition Review spec — 2 tables, 5 automations, 3 gate rules	Phase 4 — all steps

PHASE 1

Shared Reference Tables

BUILD FIRST — ALL THREE WORKFLOWS DEPEND ON THESE

Communities · Lot Status · Asset Status · Lots — built once, shared across WF001, WF002, and WF003

¡ These four tables are shared infrastructure. Build them before any workflow-specific table. Do not duplicate — every workflow references the same records.

P1-S1 · Communities Table (68 records)

Source: **dw_PDS.xlsx (Reportable = Yes)** · Referenced by: **WF001, WF002, WF003**

STEP 1

Create the Communities table

In QB → Tables → + New Table. Name: `Communities` . This is a reference/master table — no workflow stage field needed.

STEP 2

Add all fields

Add the following fields to the Communities table:

Field Name	Type	Notes
Short Name	Text	Primary key — unique community code (e.g., APPLE, RIV). Used in all cascade dropdowns and cross-table relationships.
Community Display Name	Text	Human-readable full name shown in QB forms and reports.
State	Text	Two-letter state abbreviation. Used to filter vendors by state in WF002.
Vehicle / Fund	Text	Investment vehicle (Single Asset, Fund II, JREFI, JREFII, Kippy, Harpreet, Baker, Origins).
Property Type	Multi-select	Values: ManufacturedHousing | RVCampground | Mixed
Age Category	Multi-select	Values: All-Ages | 55+ | 50+
MH Lots	Numeric (integer)	Total manufactured housing pad sites.
RV Lots	Numeric (integer)	Total RV/campground sites. 0 for MH-only communities.
Total Units	Formula (numeric)	= [MH Lots] + [RV Lots]. Auto-calculated.
Occupancy %	Percent	Current physical occupancy. Updated periodically from dw_PDS.
2026 MH Lot Rent	Currency	Gross monthly MH lot rent. $0 for RV-primary communities.
Active	Checkbox (Yes/No)	Controls whether community appears in all workflow dropdown lists. Default: Yes for all 68.

STEP 3 **Import the 68 community records**

In QB → Communities table → Import → From CSV. Export the 68 communities from `dw_PDS.xlsx` (Reportable = Yes rows) and import. Map columns to field names above. Verify Active = Yes for all 68 after import.

⚠ Do not create community records manually — import from dw_PDS to ensure exact Short Name values match RM. Short Name is the key used for all cascades and cross-references.

P1-S2 · Lot Status Reference Table (16 values)

Source: **Unit Type Listing.xlsx (RM-aligned)** · Referenced by: **WF001 cascade filters, WF002 automations, WF003 automations**

STEP 1

Create the Lot Status table

In QB → Tables → + New Table. Name: `Lot Status`. This is a standalone lookup table — it holds every valid Lot Status value system-wide.

STEP 2

Add all fields

Field Name	Type	Notes
Status ID	Text (auto-generated formula)	Format: LS-### (e.g., LS-001). Auto-generated formula: 'LS-' & Right('000' & [Record ID#], 3)
Status Name	Text	Exact RM-aligned status label shown in all QB dropdowns and views.
Status Category	Dropdown	Values: Active | Inactive | Transitional
Description	Text (multi-line)	Operational definition — what this status means in practice.
Allows New Home Order	Checkbox (Yes/No)	WF001 filter: only lots where this = Yes appear in new order dropdowns.
Allows Move In	Checkbox (Yes/No)	Move In form filter.
Allows Move Out	Checkbox (Yes/No)	Move Out form filter.
Allows Rehab	Checkbox (Yes/No)	WF002 filter: only lots where this = Yes are eligible for Rehab Records.
Allows Listing	Checkbox (Yes/No)	Listing workflow filter.

STEP 3

Create the 16 Lot Status records (enter manually)

Create one record per row below. Match Status Name exactly — these are RM-aligned values.

Status Name	Category	New HO	Move In	Move Out	Rehab	Listing
Lot	Active	Yes	Yes	No	Yes	Yes
Lot-Avail(POH)	Active	No	Yes	No	No	Yes
Lot-Rental	Active	No	No	Yes	No	No
Lot-LTP	Active	No	No	Yes	No	No
Lot-RV	Active	No	No	Yes	No	No
Lot-RV(Transient)	Active	No	No	Yes	No	No
Lot-RV(Seasonal)	Active	No	No	Yes	No	No
Lot-In Rehab	Transitional	No	No	No	Yes	No
Lot-Need Rehab	Transitional	No	No	No	Yes	No
Lot-Pending(POH)	Transitional	No	No	No	No	No
Lot-Evicted	Transitional	No	No	Yes	No	No
Lot-Evicted (Rental)	Transitional	No	No	Yes	No	No
Lot-Demo	Inactive	No	No	No	No	No
Lot-Abandoned	Inactive	No	No	No	No	No
Lot-Not Ready	Inactive	No	No	No	No	No
Lot-Unusable	Inactive	No	No	No	No	No

P1-S3 · Asset Status Reference Table (25 values)

Source: **Asset Status.xlsx (RM-aligned)** · Referenced by: **WF002 cascade filters, WF003 automations**

STEP 1

Create the Asset Status table

In QB → Tables → + New Table. Name: `Asset Status`. Standalone lookup table for all valid Asset Status values system-wide.

STEP 2

Add all fields

Field Name	Type	Notes
Status ID	Text (auto-formula)	Format: AS-### (e.g., AS-001). Formula: 'AS-' & Right('000' & [Record ID#], 3)
Status Name	Text	Exact RM-aligned status label.
Status Category	Dropdown	Values: Active | Inactive | Transitional
Description	Text (multi-line)	Operational meaning.
Allows Rehab Walkthrough	Checkbox (Yes/No)	FastField form filter: only assets where this = Yes are eligible for walkthrough submission.
Allows Listing	Checkbox (Yes/No)	Listing workflow filter.

STEP 3

Create the 25 Asset Status records

Enter one record per row. Status Name must match RM exactly.

Status Name	Category	Rehab WT	Listing
Rental	Active	No	No
In Use	Active	No	No
For Sale	Active	No	Yes
Lease Option (LOP)	Active	No	No
Rent to Own Agreement	Active	No	No
Promissory Note	Active	No	No
Needs Rehab	Transitional	No	No
Rehab in Process	Transitional	Yes	No
TBD	Transitional	No	No
Delivered	Transitional	No	No
Ordered	Transitional	No	No
Setting Needed	Transitional	No	No
Permit Pending	Transitional	No	No
Pending Sale	Transitional	No	No
Eviction Filed	Transitional	No	No
Title Pending Transfer to Buyer	Transitional	No	No
Title Pending Transfer to Parakeet	Transitional	No	No
Waiting on Title	Transitional	No	No
Abandoned	Inactive	No	No
To Be Demoed	Inactive	No	No
Sold	Inactive	No	No
In Storage	Inactive	No	No
Declaratory Judgement	Inactive	No	No
Title in Deceased Owners Name	Inactive	No	No
< UNASSIGNED >	Inactive	No	No

P1-S4 · Lots Table

Source: **WF001 Spec §3.3** · Referenced by: **WF001, WF002, WF003 (cascade dropdowns)**

STEP 1

Create the Lots table

In QB → Tables → + New Table. Name: `Lots`. This is the system-wide lot reference. Every Home Order, Rehab Record, and Disposition Item links to a Lot record.

STEP 2

Add all fields

Field Name	Type	Required	Notes
Lot ID	Auto-number	Auto	System-generated primary key.
Community	Relationship → Communities	Yes	Links to the Communities table. Drives the Community → Lot cascade.
Lot Number	Text	Yes	Must be unique within community. Used in form display and cascade filters.
Lot Status	Relationship → Lot Status	Yes	Links to Lot Status reference table. Set by automation only — never manually by CM. Drives all cascade filters system-wide.
Has Active Asset	Formula (Checkbox)	Auto	True if count of linked assets > 0 and Status ≠ Archived.
Active Asset Status	Lookup	Auto	Pulls status field from the active linked asset record.
Current Resident Name	Text	No	Updated at move-in / move-out.
Buildable Envelope	Text	No	Lot dimension constraints for home placement.
Door Swing	Text	No	Entry door orientation relative to lot.
Electrical Details	Text	No	Panel size, service type.
Water / Sewer Available	Checkbox	No	Confirmed utilities present at lot.
Site Survey Completed	Checkbox	No	Required for Gate HO-G2 (Home Order approval).
Site Survey Upload	File Attachment	No	Survey document.
Notes	Text (multi-line)	No	Internal notes.

STEP 3

Import lot records from Rent Manager

Export all lots from RM (all 68 communities) as CSV. Import into QB Lots table. Map Community to Community Short Name. After import, verify Lot Count matches RM totals per community. Set Lot Status = `Lot` (Available) as the default for all vacant lots.

🔴 Lot Status must be kept current at all times — it drives every cascade filter in the system. If Lot Status is wrong, wrong lots appear in forms. Automations LS-1 through LS-6 (Phase 2) maintain Lot Status automatically. Until those automations are live, Sys Admin is responsible for manual updates.

PHASE 2

WF001 — Home Ordering

SPEC V1.2 · APPROVED

12 stages · 7 tables · 4 FastField forms · 20 automations (A1–A14, LS-1–LS-6) · 9 gate rules

7	4	14	6	9
QB Tables	FastField Forms	Workflow Automations	Lot Status Automations	Gate Rules

12
Workflow Stages

P2-S1 · Home Orders Table (Master)

Source: **WF001 Spec §3.2**

STEP 1

Create the Home Orders table

In QB → Tables → + New Table. Name: `Home Orders`. This is the spine of WF001 — one record = one home order.

STEP 2

Add identity & property fields

Field Name	Type	Required	Notes
Record ID#	Auto-number	Auto	QB system field — leave as-is.
Home Order #	Formula (Text)	Auto	Formula: 'HO-' & Text(Year([Date Created])) & '-' & Right('000' & [Record ID#], 3)
Community / Property	Relationship → Communities	Yes	Top of cascade chain. Drives Lot filter. Always selected first.
Lot Number	Relationship → Lots	Yes	Filtered: only lots in selected Community where Lot Status = 'Lot' (Available). Cascades from Community selection.
Infill Reason	Multi-select	Yes	Values: Occupied Lot Turnover | Vacant Lot | Demo Lot
Date Created	Date	Auto	Auto-set on record creation.
Created By	User	Auto	Auto-set on record creation.

STEP 3 Add manufacturer & home detail fields

Field Name	Type	Required	Notes
Manufacturer	Multi-select	Yes	Values: Cavco | Clayton | Skyline | Champion | Other
Floor Plan Name	Text	Yes	Free text — name as provided by manufacturer.
Model	Text	No	Model number/name.
Production Line	Text	Yes	Production line code from manufacturer.
Home Type	Multi-select	Yes	Values: Single Wide | Double Wide | Triple Wide
Setup Type	Multi-select	No	Values: Piers | Runners | Full Slab | Stem Wall
Dimensions	Text	No	e.g., 16x76
Square Footage	Numeric	No	Calculated from dimensions or entered manually.
Bedrooms	Numeric	No	Integer.
Bathrooms	Numeric (decimal)	No	e.g., 2.0, 2.5
Serial Number	Text	No*	Required before advancing to Delivery Scheduled (enforced by Gate HO-G3). Enter when known.

STEP 4 Add dates & timeline fields

Field Name	Type	Required	Notes
Order Date	Date	Yes	mm/dd/yy
Online Date	Date	No	When home enters factory production. Triggers A4 notification on change.
Offline Date	Date	No	When home leaves factory. Triggers A4 notification on change.
Estimated Delivery Date	Date	Yes (at HO-G1)	Triggers A4 notification on change.
Actual Delivery Date	Date	No	Required before advancing to CI Ready (Gate HO-G4).
Set Date	Date	No	Date home is set on lot.
Construction Inspection Date	Date	Auto	Auto-set when Construction Inspection Record created.
Ops Readiness Date	Date	Auto	Auto-set when Ops Readiness Record created.
Listing Date	Date	Auto	Auto-set at Stage 12 (Listed — Complete).
Storage Start Date	Date	Conditional	Set when Storage Required = Yes is checked.

STEP 5 Add financial fields

Field Name	Type	Required	Notes
Purchase Price	Currency	Yes	$1,234.56 format. Required for Gate HO-G2.
Purchase Date	Date	Yes	mm/dd/yy.
Floorplan Line	Text	No	Accounting reference.
Loan Number	Text	No	Lender loan number.
Loan Amount	Currency	No	$1,234.56 format.
Lender	Text	No	Lender name.
Insurance Carrier	Text	No	Required before listing.
Insurance Policy #	Text	No	Required before listing.

STEP 6

Add status & stage fields

Field Name	Type	Required	Notes
Workflow Stage	Multi-select (locked)	Yes	12 values — see stage list below. Set by automations & gates ONLY. Never manually edited by Community Managers.
Status	Multi-select	Yes	Values: Active | On Hold | Cancelled
Storage Required?	Checkbox	No	When checked, triggers Automation A5 and activates the Stage 7 (In Storage) path.
Storage Location	Multi-select	Conditional	Values: On Lot | Manufacturer | Community | Other. Required when Storage Required = Yes.
Lot Fit Issue?	Checkbox	No	Checked if delivered home does not fit lot. Triggers A9 (hard stop + escalation).
RM Asset Record #	Text	No	Manual cross-reference to Rent Manager asset record.
RM Unit #	Text	No	Manual cross-reference to RM unit number.
Internal Notes	Text (multi-line)	No	
Last Updated	Date/Time	Auto	QB auto-stamp.
Last Updated By	User	Auto	QB auto-stamp.

STEP 7

Configure the Workflow Stage field values

The Workflow Stage field must contain exactly these 12 values in this order:

#	Stage Name	Notes
1	Infill Need Identified	Starting stage on new record creation.
2	Lot Due Diligence	Site survey and lot assessment.
3	Home Selected	Manufacturer and floor plan confirmed.
4	Order Placed	Order submitted to manufacturer.
5	File & Asset Setup	RM record creation, insurance, loan docs.
6	In Production	Home in factory.
7	In Storage	★ Conditional — activated only when Storage Required = Yes. Skip to Stage 8 if no storage.
8	Delivery Scheduled	Carrier and date confirmed.
9	Delivered	Home on lot — triggered by FastField Form 1 submission.
10	Home Set & Construction Inspection	Setup complete; FastField Form 2 underway.
11	Ops & Sales Readiness	FastField Form 3 underway.
12	Listed — Complete	All gates cleared; home listed.

⚠ Stage 7 (In Storage) is conditional. The path is: Stage 6 → Stage 8 (no storage) OR Stage 6 → Stage 7 → Stage 8 (storage required). Configure Automation A5 (Phase 2, P2-S13) to handle this branching.

P2-S2 · Workflow Tasks Table

Source: **WF001 Spec §3.4**

STEP 1 **Create the Workflow Tasks table**

In QB → Tables → + New Table. Name: `Workflow Tasks` . This is a child table of Home Orders — one record per task per home order.

STEP 2 **Add all fields**

Field Name	Type	Required	Notes
Task ID	Auto-number	Auto	System-generated.
Task #	Formula (Text)	Auto	Formula: 'TK-' & Text(Year([Date Created])) & '-' & Right('00000' & [Record ID#], 5)
Home Order	Relationship → Home Orders	Yes	Parent record. Auto-linked by automations.
Task Name	Text	Yes	Auto-populated by automation templates.
Task Category	Multi-select	Yes	Values: Due Diligence | Order | Setup | Delivery | Inspection | Readiness | Listing
Assigned To	User	No	QB user account. Auto-set by automation.
Assigned Role	Multi-select	No	Role from Roles Reference (§ P0-S2).
Due Date	Date	No	Auto-populated from Order Date offset by automation rule.
Status	Multi-select	Yes	Values: Not Started | In Progress | Complete | Blocked
Completed Date	Date	No	Set when Status → Complete.
Completion Notes	Text (multi-line)	No	
Required Before Next Stage	Checkbox	No	Gate enforcement flag — checked tasks must be Complete before stage advances.

P2-S3 · Delivery Records Table

Source: **WF001 Spec §3.5 — Populated by FastField Form 1**

STEP 1 **Create the Delivery Records table**

In QB → Tables → + New Table. Name: `Delivery Records`. Child of Home Orders. One record per delivery per home. Populated via FastField Form 1 webhook.

STEP 2 **Add all fields**

Field Name	Type	Required	Notes
Delivery Record ID	Auto-number	Auto	
Home Order	Relationship → Home Orders	Yes	Matched via Home Order # from FastField payload.
Delivery Date	Date	Yes	From FastField.
Received By	User	Yes	From FastField.
Home Visually Confirmed	Checkbox	Yes	From FastField.
Serial Number Photo	File Attachment	Yes	Photo of VIN plate.
Serial Number Confirmed	Text	Yes	Must match Home Orders.Serial Number.
Video Uploaded	Checkbox	Yes	Walkaround video confirmed.
Photos Uploaded	File Attachment	Yes	Minimum 5 exterior photos.
Photo Count	Numeric	Yes	Minimum 5 required.
Exterior Checklist Completed	Checkbox	Yes	Transportation damage check complete.
Lot Fit Confirmed	Checkbox	Yes	If No → triggers Lot Fit Issue flag on Home Order + Automation A9.
Delivery Notes	Text (multi-line)	No	
Submitted Via	Text (auto)	Auto	Always: FastField
Submission Timestamp	Date/Time (auto)	Auto	Auto-set on FastField submission.

P2-S4 · Construction Inspection Records Table

Source: **WF001 Spec §3.6 — Populated by FastField Form 2 (89-item checklist)**

STEP 1

Create the Construction Inspection Records table

In QB → Tables → + New Table. Name: `Construction Inspection Records`. Child of Home Orders. Populated via FastField Form 2 webhook. Represents Director of Construction sign-off.

STEP 2

Add header & identity fields

Field Name	Type	Required	Notes
Inspection Record ID	Auto-number	Auto	
Home Order	Relationship → Home Orders	Yes	Matched via Home Order # from FastField payload.
Inspection Date	Date	Yes	From FastField.
Inspected By	User	Yes	Director of Construction or designee.
Setup Type	Multi-select	Yes	Values: Piers | Runners | Full Slab | Stem Wall
City / State	Text	Yes	Community location.

STEP 3 **Add section pass/fail count fields**

Add one numeric field per section for Pass counts and one for Fail counts (auto-calculated from FastField payload):

Section	Pass Count Field	Fail Count Field	N/A Count Field	Item Count
A — Roof: Structural Integrity & Installation	Roof — Pass Count	Roof — Fail Count	Roof — N/A Count	10
B — Underneath Home	Underneath — Pass Count	Underneath — Fail Count	Underneath — N/A Count	12
C — Exterior	Exterior — Pass Count	Exterior — Fail Count	Exterior — N/A Count	5
D — Home Interior	Interior — Pass Count	Interior — Fail Count	Interior — N/A Count	27
E — Windows & Doors	Win/Doors — Pass Count	Win/Doors — Fail Count	Win/Doors — N/A Count	6
F — Electrical	Electrical — Pass Count	Electrical — Fail Count	Electrical — N/A Count	13
G — Plumbing	Plumbing — Pass Count	Plumbing — Fail Count	Plumbing — N/A Count	16

STEP 4 **Add calculated summary & sign-off fields**

Field Name	Type	Notes
Total Items Inspected	Numeric	89 total items possible.
Total Pass	Numeric (formula)	Sum of all Section Pass Count fields.
Total Fail	Numeric (formula)	Sum of all Section Fail Count fields. If > 0 → triggers A11 (remediation task).
Total N/A	Numeric (formula)	Sum of all Section N/A Count fields.
All Items Pass or N/A	Formula (Checkbox)	True when Total Fail = 0. Triggers A10 (advance to Ops & Sales Readiness).
Items Requiring Attention	Text (multi-line)	Description of any failed items. From FastField.
Construction Sign-Off	Checkbox	Final sign-off by Director of Construction. Must be checked before Form 3 can begin.
Sign-Off Date	Date	Date of construction sign-off.
Full Inspection PDF	File Attachment	FastField auto-generates and attaches.
Submitted Via	Text (auto)	Always: FastField
FastField Submission ID	Text	UUID from FastField. Stored for audit traceability.

P2-S5 · Ops Readiness Records Table

Source: **WF001 Spec §3.7 — Populated by FastField Form 3 (71-item checklist)**

STEP 1

Create the Ops Readiness Records table

In QB → Tables → + New Table. Name: `Ops Readiness Records`. Child of Home Orders. Populated via FastField Form 3 webhook. Requires Construction sign-off on file as prerequisite.

STEP 2

Add header & identity fields

Field Name	Type	Required	Notes
Readiness Record ID	Auto-number	Auto	
Home Order	Relationship → Home Orders	Yes	Matched via Home Order # from FastField.
Inspection Date	Date	Yes	From FastField.
Home Type	Multi-select	Yes	Values: New Delivery | Rehab | Turnover
Inspection Type	Multi-select	Yes	Values: Weekly | Pre-Listing | Pre-Move-In
Construction Sign-Off On File	Checkbox	Yes	Must be checked — prerequisite before form submits. Pulls from parent Home Order's Construction Inspection record.
Completed By — Facility Mgr	User	Yes	Facility Manager sign-off.
Completed By — Comm Mgr / Sales Rep	User	Yes	Community Manager or Sales Rep sign-off.

STEP 3 **Add section fail count fields (10 sections)**

Section (from Form 3)	Fail Count Field	Item Count
A — Utility Verification	Utility — Fail Count	10
B — Rehab-Specific Utility Verification	Rehab Utility — Fail Count	4
C — Mechanical & Safety	Mechanical Safety — Fail Count	5
D — Exterior & Curb Appeal	Exterior — Fail Count	8
E — Entry, Windows & Doors	Entry Win Doors — Fail Count	6
F — Kitchen	Kitchen — Fail Count	9
G — Bathrooms	Bathrooms — Fail Count	7
H — Interior Presentation & Living Spaces	Interior — Fail Count	8
I — Cleanliness	Cleanliness — Fail Count	8
J — Escalation & Follow-Up	Escalation — Fail Count	6

STEP 4 **Add calculated summary, escalation & sign-off fields**

Field Name	Type	Notes
Total Fail Count	Numeric (formula)	Sum of all 10 Section Fail Count fields. If > 0 → triggers A13 (remediation).
Home Ready for Listing	Formula (Checkbox)	True when Total Fail Count = 0. Triggers A12 (advance to pre-listing).
Issue Description / Escalation Notes	Text (multi-line)	Required if any fails.
Regional Mgr Notified	Checkbox	Escalation tracking.
Vendor Notified	Checkbox	Escalation tracking.
Work Order Submitted	Checkbox	Escalation tracking.
Follow-Up Date	Date	Escalation tracking.
Facility Mgr Sign-Off	Checkbox	Facility Manager final sign-off.
Comm Mgr / Sales Rep Sign-Off	Checkbox	Community Manager / Sales Rep final sign-off.
Full Readiness PDF	File Attachment	FastField auto-generated.
Submitted Via	Text (auto)	Always: FastField

P2-S6 · Listing Records Table

Source: **WF001 Spec §3.8 — Populated by FastField Form 4**

STEP 1

Create the Listing Records table

In QB → Tables → + New Table. Name: `Listing Records`. Child of Home Orders. Populated via FastField Form 4. Triggers Stage 12 (Listed — Complete) via Automation A14.

STEP 2

Add all fields

Field Name	Type	Required	Notes
Listing Record ID	Auto-number	Auto	
Home Order	Relationship → Home Orders	Yes	Matched via Home Order # from FastField.
Listed By	User	Yes	Sales staff who completed the listing form.
Listing Date	Date	Yes	mm/dd/yy.
Construction Inspection Approved	Checkbox	Yes	Pre-listing verification item 1 of 7.
Ops & Sales Readiness Approved	Checkbox	Yes	Pre-listing verification item 2 of 7.
Insurance Active in RM	Checkbox	Yes	Pre-listing verification item 3 of 7.
Loan Documents Uploaded to RM	Checkbox	Yes	Pre-listing verification item 4 of 7.
Serial Number Confirmed in RM	Checkbox	Yes	Pre-listing verification item 5 of 7.
Asset Status Updated in RM	Checkbox	Yes	Pre-listing verification item 6 of 7.
Manufacturer Packet Confirmed	Checkbox	Yes	Pre-listing verification item 7 of 7.
All Pre-Listing Items Complete	Formula (Checkbox)	Auto	True only when all 7 above = Yes. Formula: [Item1] AND [Item2] AND [Item3] AND [Item4] AND [Item5] AND [Item6] AND [Item7]. Triggers A14 when True.
Internal Notification Sent	Checkbox (auto)	Auto	Auto-set by Automation A14.
Notes	Text (multi-line)	No	

P2-S7 · Cascading Dropdown Configuration

Source: **WF001 Spec §3A — System-wide standard. Applies to all QB and FastField forms.**

🔴 SYSTEM-WIDE STANDARD — NO EXCEPTIONS. Every form that includes Community, Lot, or Asset selection MUST follow this configuration. Do not use free-text fields for these selections.

STEP 1

Configure Community → Lot relationship

In QB → Relationships: confirm Communities → Lots relationship exists (one-to-many). In the Lots table's Community field settings, ensure it links to the Communities table.

STEP 2

Configure Lot field filter on every form

On every QB form that includes a Lot field: In the Lot field's form settings → enable *Filter related records* → add filter: `[Community on Lot record] = [Community on current form]`. Then add a second filter condition for Lot Status based on the form context (see table below).

Form / Context	Lot Status Filter	Asset Filter
Home Order (new)	Lot Status = Lot (Available only)	No asset — new home being ordered
Move In	Lot Status = Lot OR Lot-Avail(POH) (Allows Move In = Yes)	If community-owned home sale → listed assets on Lot
Move Out	Lot Status = any Active rental status (Allows Move Out = Yes)	Assets on selected Lot
Rehab Walkthrough (WF002)	Lot Status = Lot-In Rehab (Allows Rehab = Yes)	Rehab-in-Process assets on Lot
Construction Inspection (FF Form 2)	Pre-populated via launch link — do not filter manually	Linked to QB Home Order record
Ops & Sales Readiness (FF Form 3)	Pre-populated via launch link — do not filter manually	Linked to QB Home Order record
WF003 Disposition Items	No status restriction — any recently vacated unit may be reviewed	No restriction — snapshot captured at review

STEP 3

Configure FastField pre-populated launch links

Field forms (Delivery Confirmation, Construction Inspection, Ops Readiness) use QB-generated launch links — field staff do not manually select Community, Lot, or Home Order. Configure as follows:

- In QB → Home Orders table → create a formula URL field: `"https://app.fastfieldforms.com/form/[FORM_ID]?home_order=" & [Home Order #] & "&community=" & URLEncode([Community]) & "&lot=" & URLEncode([Lot Number])`
- Add this launch link field to the QB Home Order record's view so managers can tap/click to open the pre-filled FastField form.
- Confirm the link opens correctly on iOS and Android — test before go-live.

P2-S8 · QB Forms Configuration (10 forms)

Source: **WF001 Spec §4.1**

STEP 1

Create all 10 QB forms

In QB → Home Orders table → Forms → + New Form. Create one form per row below:

Form #	Form Name	Primary Users	Key Behavior
Form 1	New Home Order	Sales	Community, Lot (filtered: Available only), Infill Reason, Manufacturer, Floor Plan, Production Line, Order Date. Triggers LS-1 (Lot → Reserved) on save.
Form 2	Lot Due Diligence Entry	Operations / Construction	All Lot table fields, pre-linked to the lot on the Home Order. Gate HO-G2 requires Site Survey Completed before stage advances.
Form 3	Home Details & Asset Setup	Asset Mgmt / Sales	Model, Setup Type, Dimensions, Sq Ft, Bedrooms, Bathrooms, Home Type, RM Asset Record #, Purchase Price, Purchase Date. First RM cross-reference entry.
Form 4	Date Management	Sales	Online Date, Offline Date, Estimated Delivery Date. Triggers A4 (date change notification) on every save where any date field changes.
Form 5	Storage Entry	Construction	Storage Required (checkbox), Storage Location, Storage Start Date. Conditional — only shown when Storage Required = Yes. Triggers A5.
Form 6	Delivery Coordination	Construction	Estimated Delivery Date update, delivery vendor notes, assigned receiver. Advances stage to Delivery Scheduled.
Form 7	Post-Delivery Asset Update	Asset Mgmt	Actual Delivery Date, documentation status checklist, RM confirmation fields, Lot Fit Issue flag. Completed after FastField Form 1 is submitted.
Form 8	Insurance & Loan Entry	Accounting	Floorplan Line, Loan Number, Loan Amount, Lender, Insurance Carrier, Insurance Policy #. Required for Gate HO-G2.
Form 9	Set & Utility Coordination	Construction	Set Date, utility accounts live confirmation. Completed after home is set on the lot.
Form 10	Pre-Listing Final Gate	Sales	All 7 pre-listing checklist items — hard validation: all must = Yes before form saves. Links to Listing Records table. Triggers A14.

P2-S9 · FastField Form 1 — Home Delivery Confirmation

Source: **WF001 Spec §6.1 — QB target: Delivery Records table. Triggers: A7 (stage → Delivered).**

STEP 1

Create Form 1 in FastField

In FastField → Forms → + New Form. Name: `WF001 Form 1 — Home Delivery Confirmation`. Set QB target table: `Delivery Records`. Matching key: `Home Order #`.

STEP 2

Build the form sections

Section	Fields	Type	Required
A — Home ID	Home Order # (pre-populated); Community (pre-populated); Lot # (pre-populated); Delivery Date	Text / Date	All required
B — Serial Number	Serial Number (as shown on VIN plate); Serial Number Photo	Text / Photo Capture	Both required
C — Photo & Video	Walkaround Video uploaded (Yes/No); Exterior Photo Set (min 5 photos); Photo count verified	Photo Capture / Checkbox	All required
D — Exterior Condition	Transportation damage check: siding, eaves, windows, roof visual, foundation area. Pass / Fail / N/A + Notes per item.	Dropdown + Notes	All required
E — Lot Fit	Home fits lot as ordered (Yes/No). If No: description of fit issue (text field)	Checkbox + Text	Required
F — Submission	Received By (name); Inspector signature; Submission timestamp (auto)	Text / Signature / Auto	All required

STEP 3

Configure FastField → QB webhook

In FastField → Form 1 → Settings → Integrations → Webhook: enter the QB webhook URL for the Delivery Records table. Map FastField fields to QB fields (match names exactly as defined in P2-S3). Test with a sandbox submission.

ℹ When Lot Fit Confirmed = No on the FastField submission, the webhook payload triggers A9 — the Lot Fit Issue flag is automatically set on the parent Home Order record and an escalation task is created. No manual action required from the field.

P2-S10 · FastField Form 2 — Construction Inspection (89 Items)

Source: **WF001 Spec §6.2 — QB target: Construction Inspection Records. Completed by: Director of Construction. Triggers: A10 (all pass) or A11 (any fail).**

STEP 1

Create Form 2 in FastField

Name: `WF001 Form 2 — Construction Inspection`. QB target: `Construction Inspection Records`. Matching key: `Home Order #`. Pre-populated header fields from QB launch link: Property/Community, Lot #, Home Model, Serial Number.

STEP 2 **Build the 7 checklist sections (89 items total)**

Each item: Yes / No / N/A dropdown + Notes field. Set Hard Validation: form cannot submit if any item = No without documented reason override.

Section	Item Count	Key Items
A — Roof: Structural Integrity & Installation	10	Shingles, ridge vent, debris-free, vents sealed, flashing
B — Underneath Home: Structure, Blocking & Mechanical Runs	12	Blocking, marriage line seal, duct suspension, sewer/water crossovers, bottom board
C — Exterior: Structural & Transportation Damage Check	5	Close-up boards, lap siding, transportation damage-free, GFI covers
D — Home Interior: Installation Quality	27	Mate line doors, floors, trim, wall panels, appliances, cabinets, tubs, caulking, toilets, faucets, vinyl flooring
E — Windows & Doors: Operation & Security	6	Interior/exterior doors, locks/keys, windows/screens/blinds
F — Electrical Check	13	Switch plates, panel/breakers, GFI, receptacles, switches, appliances, smoke detectors, bath fans
G — Plumbing Check	16	Pressure test, commodes, aerators, P-traps, sewer function test

STEP 3 **Add sign-off & submission fields**

Final section: `☐ APPROVED — All items confirmed` / `☐ ITEMS REQUIRING ATTENTION — See notes`. Director of Construction signature. Date. Submit button.

STEP 4 **Configure webhook to Construction Inspection Records**

Map all section pass/fail counts to the corresponding QB fields (Section A–G Pass/Fail Count fields). Map signature to Sign-Off field. Confirm `All Items Pass or N/A` formula evaluates correctly after webhook push.

P2-S11 · FastField Form 3 — Ops & Sales Readiness (71 Items)

Source: **WF001 Spec §6.3 — QB target: Ops Readiness Records. Completed by: Facility Manager + Comm Mgr/Sales Rep. Triggers: A12 (all pass) or A13 (any fail).**

STEP 1

Create Form 3 in FastField

Name: `WF001 Form 3 — Ops & Sales Readiness`. QB target: `Ops Readiness Records`. Matching key: `Home Order #`. Pre-populated: Property/Community, Home/Unit #, from QB launch link.

STEP 2

Add form header fields

Home Type (New Delivery / Rehab / Turnover); Inspection Type (Weekly / Pre-Listing / Pre-Move-In); Construction Sign-Off on File? (Yes/No — **must be Yes to submit**); Completed By (auto from FastField login); Date (auto).

STEP 3

Build the 10 checklist sections (71 items total)

Section	Item Count	Who Completes
A — Utility Verification: Physically confirmed; no assumptions	10	Facility Manager
B — Rehab-Specific Utility Verification (N/A if new delivery)	4	Facility Manager
C — Mechanical & Safety	5	Facility Manager
D — Exterior & Curb Appeal	8	Community Manager / Sales Rep
E — Entry, Windows & Doors	6	Community Manager / Sales Rep
F — Kitchen	9	Community Manager / Sales Rep
G — Bathrooms	7	Community Manager / Sales Rep
H — Interior Presentation & Living Spaces	8	Community Manager / Sales Rep
I — Cleanliness: Turnover & Show Standard	8	Community Manager / Sales Rep
J — Escalation & Follow-Up	6	Facility Manager

STEP 4

Add two signature capture fields

Signature 1: *Facility Manager — Utility & Condition Verification*. Signature 2: *Community Manager / Sales Representative — Show-Readiness Sign-Off*. Both required for form submission.

STEP 5

Configure webhook to Ops Readiness Records

Map section fail counts to the corresponding QB fail count fields (P2-S5). Map Home Ready for Listing formula input fields. Confirm formula evaluates after webhook push.

P2-S12 · FastField Form 4 — Listing Form

Source: **WF001 Spec §6.4 — QB target: Listing Records. Completed by: Sales. Triggers: A14 (stage → Listed — Complete).**

STEP 1

Create Form 4 in FastField

Name: `WF001 Form 4 — Listing Form`. QB target: `Listing Records`. Matching key: `Home Order #`. Pre-populated: Home Order #, Community, Lot # from QB launch link.

STEP 2

Build the verification section (7 items — ALL must be Yes)

Create 7 Yes/No checkboxes. Hard validation: form **cannot be submitted if any item = No**. No override allowed.

#	Item	Responsible Party
1	Construction Inspection approved and sign-off on file	Sales / Construction
2	Ops & Sales Readiness approved and sign-off on file	Sales / Ops
3	Insurance active in Rent Manager	Accounting
4	Loan documents uploaded to Rent Manager	Accounting
5	Serial number confirmed and recorded in Rent Manager	Asset Management
6	Asset status updated in Rent Manager	Asset Management
7	Manufacturer packet confirmed and on file	Sales

STEP 3

Add submission fields and configure webhook

Submitted By (auto from FastField login); Submission Timestamp (auto). Configure webhook to Listing Records table in QB. After push, confirm `All Pre-Listing Items Complete` formula evaluates to True and triggers A14.

P2-S13 · Automations A1–A14 (Workflow Automations)

Source: **WF001 Spec §5 — All automations are QB-native Pipelines unless noted.**

> ¡ Build each automation in QB → Pipelines → + New Pipeline. Name each pipeline exactly as shown in the ID column. Set trigger and action as specified.

ID	Trigger	Timing	Action
A1	New Home Order record created	Immediate	Create Stage 1–2 task set (lot due diligence tasks). Set Lot Status → Reserved via LS-1 automation. Assigned roles receive task notifications.
A2	Workflow Stage changes to *Home Selected*	Immediate	Create Stage 3–4 task set (order confirmation, asset setup tasks). Notify Sales and Accounting.
A3	Workflow Stage changes to *Order Placed*	Immediate	Create Stage 5 task set (file & asset setup tasks). Notify Sales, Asset Mgmt, Ops Coord.
A4	Online Date, Offline Date, or Estimated Delivery Date changes on a Home Order record	On save	Send date change notification email to all departments: Regional, Ops, Accounting, Asset Mgmt, Construction. Include new date values and Home Order # in email body.
A5	Storage Required? = checked on Home Order record	Immediate	Create storage coordination task (assigned to Construction and Asset Mgmt). Set Stage path to include Stage 7 (In Storage). Flag record for Storage Aging view.
A6	Scheduled daily at 6:00 AM ET	Scheduled	Check all Home Orders where Storage Required = Yes AND Storage Start Date populated. If (Today − Storage Start Date) > 30 days → send storage aging alert to Construction, Sales, Ops. Include community, lot, home details, and days in storage.
A7	Delivery Records child record created (FastField Form 1 webhook received)	On record creation	Set Workflow Stage → Delivered. Create post-delivery task set (assigned to Asset Mgmt, Accounting, Sales). Send delivery confirmation notification.
A8	Workflow Stage = Delivery Scheduled AND Serial Number is blank	Immediate (on stage change)	Send non-blocking warning notification to Sales and Asset Mgmt: 'Serial number is missing before delivery. Please update before the home arrives.' This is a warning only — does not block stage advancement.
A9	Lot Fit Issue? = checked on Home Order record	Immediate	Send immediate alert to Sales, Asset Mgmt, and Accounting. Create escalation task (assigned to Construction). **Hard stop: block Workflow Stage advancement until Lot Fit Issue = unchecked by authorized user.**
A10	Construction Inspection Record created AND All Items Pass or N/A = True	Immediate	Set Workflow Stage → Ops & Sales Readiness. Send notification to Facility Manager, Comm Mgr, Sales: 'Construction inspection passed. Home is ready for Ops & Sales Readiness inspection.'
A11	Construction Inspection Record created AND Total Fail > 0	Immediate	Create remediation task assigned to Director of Construction. Block Workflow Stage advancement. Notification to Construction: 'Construction inspection has [N] failed items. Remediation required before advancing.'
A12	Ops Readiness Record created AND Home Ready for Listing = True	Immediate	Set Workflow Stage → pre-listing stage. Create listing task assigned to Sales and Asset Mgmt. Notification: 'Ops & Sales Readiness passed. Home is ready for pre-listing verification.'

P2-S14 · Lot Status Automations LS-1 – LS-6

Source: **WF001 Spec §5 (LS rules) and §3A – Critical for cascade filter accuracy. These are not optional.**

🔴 These 6 automations maintain Lot Status accuracy in real time. Without them, cascade dropdown filters will show wrong lots to users. Build and test all 6 before go-live.

Rule	Trigger	Lot Status Change	Notes
LS-1	New Home Order record created (linked to a Lot)	Available → Reserved (Lot → Reserved)	Lot committed to this order. Immediately removed from new Home Order and Move In filters.
LS-2	Home Order Status changes to Cancelled	Reserved → Available (back to 'Lot')	Lot freed. Immediately re-appears in applicable filters.
LS-3	Move In request processed/approved in QB	Reserved → Occupied (Lot-Rental or Lot-LTP)	Resident has moved in. Lot now appears in Move Out filter only.
LS-4	Move Out request processed/approved in QB	Occupied → Available ('Lot')	Lot is vacant again. Re-appears in Move In and new Home Order filters.
LS-5	Workflow Stage changes to Listed – Complete (Stage 12)	No change – stays Reserved	Lot stays Reserved until Move In is processed (LS-3). Do not change to Available.
LS-6	Home delisted with no active resident on lot	Reserved → Available ('Lot')	Listing cancelled before move-in. Lot freed back to available pool.

P2-S15 · Gate Rules – WF001

Source: **WF001 Spec §8 – All gates are hard blocks. No soft warnings that allow continuation.**

⚠ Every gate must be implemented as a hard field-level validation block in QB – the stage field is locked until all conditions are met. Gates that can be bypassed are not compliant.

HOME ORDERING GATES (§8.1)

Gate ID	Gate Name	Transition	Condition / Error Message
HO-G1	Draft → Submitted for Approval	Draft → Submitted	ALL must be true: Community selected; Lot ID populated; Home Model selected; Floor Plan selected; Estimated Delivery Date populated; Purchase Price populated; Submitted By populated. Error: *'Required fields are missing. Please complete all required fields before submitting.'*
HO-G2	Submitted → Approved / In Production	Submitted → In Production	Austin (Owner) has stamped Approved; Approval Timestamp auto-populated; Order Number assigned; Purchase Price populated; Site Survey Completed on linked Lot record. Error: *'This order requires Austin's approval before advancing to In Production.'*
HO-G3	In Production → Delivered to Site	In Production → Delivered	Actual Delivery Date populated; Delivery Confirmation attachment uploaded (FastField Form 1 record exists); Lot ID confirmed match. Error: *'Delivery cannot be confirmed until the Delivery Confirmation form (FastField Form 1) has been submitted.'*
HO-G4	Delivered → Ready for Construction Inspection	Delivered → Home Set & CI	Utility connections confirmed; Set-up complete flag = Yes (Set Date populated). Error: *'Home must be set on the lot and utilities confirmed before starting Construction Inspection.'*

CONSTRUCTION INSPECTION GATES (§8.2)

Gate ID	Gate Name	Transition	Condition / Error Message
CI-G1	Ready for Inspection → Inspection In Progress	Home Set & CI → CI In Progress	FastField Form 2 launched with valid Home Order #; Inspector identity confirmed (Inspected By populated). Error: *'Construction Inspection cannot begin without a valid Home Order # and confirmed inspector.'*
CI-G2	Inspection In Progress → Passed	CI In Progress → Ops & Sales Readiness	All 89 checklist items = Yes or N/A (Total Fail = 0); Form submitted via FastField; QB Construction Inspection Record created; Construction Sign-Off = checked. Error: *'Construction Inspection cannot pass until all items are confirmed and the Director of Construction has signed off.'*
CI-G3	Inspection In Progress → Failed	CI In Progress → Deficiency Resolution	One or more checklist items = No/Fail; Deficiency/remediation records auto-created by A11; Re-inspection must be scheduled before re-advancing.
CI-G4	Deficiency Resolution → Re-inspection	Deficiency → Re-inspection	All remediation tasks for this Home Order = Complete; Resolution notes populated; Resolved By and Resolved Date stamped. Error: *'All [N] outstanding remediation tasks must be marked Complete before re-inspection can begin.'*

OPERATIONS INSPECTION GATES (§8.3)

Gate ID	Gate Name	Transition	Condition / Error Message
OI-G1	Ready for Ops Review → Ops Inspection In Progress	Ops & Sales Readiness → Ops In Progress	Construction Inspection CI-G2 passed (CI All Items Pass = True; CI Sign-Off = Yes); FastField Form 3 launched with valid Home Order #. Error: *'Ops & Sales Readiness inspection cannot begin until Construction Inspection is fully approved and signed off.'*
OI-G2	Ops Inspection In Progress → Passed	Ops In Progress → Pre-Listing	All 71 checklist items = Yes or N/A (Ops Total Fail = 0); Manufacturer packet confirmed on file; Asset status updated in RM; Both sign-offs (Facility Mgr + Comm Mgr) checked; Form submitted via FastField. Error: *'Ops & Sales Readiness cannot be approved until all items are confirmed and both signatures are on file.'*
OI-G3	Pending Final Approval → Listed – Complete	Pre-Listing → Listed – Complete	All 7 pre-listing items on Listing Record = Yes (All Pre-Listing Items Complete = True); FastField Form 4 submitted; Austin approval stamp present. Error: *'All 7 pre-listing verification items must be confirmed before the home can be listed as Complete.'*

P2-S16 · Views & Dashboards

Source: **WF001 Spec §4.2**

STEP 1 **Create all 6 standard views**

In QB → Reports → + New Report. Create one report per row below:

View #	Name	Primary User	Filter / Sort
View 1	Pipeline Board	All roles	Kanban by Workflow Stage. Color-coded: Green = on track, Yellow = approaching deadline, Red = overdue or blocked.
View 2	My Tasks	All assigned users	Filtered: Assigned To = [Current User]. Sorted by Due Date ascending. Shows only tasks assigned to the logged-in user.
View 3	Sales Master Tracker	Sales	All active Home Orders. Key dates inline-editable. Sortable by stage, community, manufacturer, or date.
View 4	Overdue / Blocked Alert	Management	Filtered: Status = Blocked OR (Due Date < today AND Status ≠ Complete). Management escalation view.
View 5	Storage Aging Report	Construction / Sales	Filtered: Storage Required = Yes. Calculated field: Days in Storage = Today − Storage Start Date. Homes > 30 days flagged Red. Sorted by days descending.
View 6	Accounting Tracker	Accounting	Financial fields only: Purchase Price, Loan Amount, Insurance. Filterable by 'action needed' flag. Inline editable for Accounting fields only.

PHASE 3

WF002 — Rehab

SPEC V1.3 · APPROVED

9 stages · 5 tables (2 ref + 3 main) · 1 FastField form · 12 automations · 8 gate rules · SharePoint vendor integration

5	1	12	8	9
QB Tables	FastField Form	Automations	Gate Rules	Workflow Stages

37
Checklist Items

> ¡ The Lot Status and Asset Status reference tables (Phase 1) are shared with WF002. Do not recreate them. WF002 automations write to these same tables.

P3-S1 · Rehab Records Table (RH) — Main Table

Source: **WF002 Spec §4C — Parent table. One record per home rehab project.**

STEP 1

Create the Rehab Records table

In QB → Tables → + New Table. Name: `Rehab Records`. This is the parent/master table for WF002. One record = one rehab project.

STEP 2

Add identity & location fields

Field Name	Type	Required	Notes
Rehab ID	Formula (Text)	Auto	Format: RH-YYYY-###. Formula: 'RH-' & Text(Year([Date Created])) & '-' & Right('000' & [Record ID#], 3). Auto-generated on record creation.
Community	Relationship → Communities	Yes	Top of cascade chain. Required.
Lot	Relationship → Lots	Yes	Filtered to selected Community. Lot Status = Lot-In Rehab or Lot (any non-Occupied, Allows Rehab = Yes).
Asset	Relationship → Asset Status lookup	Yes	Filtered to selected Lot. Required.
RM Asset Record #	Text	No	Manual cross-reference to RM asset record. Not auto-synced.
RM Unit #	Text	No	Manual cross-reference to RM unit number.

STEP 3 Add workflow state fields

Field Name	Type	Required	Notes
Rehab Stage	Multi-select (locked)	Yes	9 values: 1 Rehab Identified | 2 Scope Assessed | 3 Work Assigned | 4 Work In Progress | 5 Walkthrough Scheduled | 6 Walkthrough Complete | 7 Items To Resolve | 8 Approved – Ready to Market | 9 Closed. Locked by gate rules. Cannot skip stages.
Triggered By	Multi-select	Yes	Values: TBD Report | Manual | Move Out | Acquisition. Determines source of rehab identification.
Source Report Reference	Text	Conditional	If Triggered By = TBD Report – report ID or run date.
Source Move Out Record #	Relationship → Move Out Records	Conditional	If Triggered By = Move Out – links to originating Move Out record.

STEP 4 Add dates fields

Field Name	Type	Notes
Rehab Identified Date	Date (auto)	Auto-populated by A-RH-01 on record creation.
Scope Assessed Date	Date (auto)	Set by A-RH-02 when Stage advances to Scope Assessed.
Work Assigned Date	Date (auto)	Set by A-RH-03 when Stage advances to Work Assigned.
Work Started Date	Date (auto)	Set by A-RH-04 when Stage advances to Work In Progress.
Walkthrough Scheduled Date	Date	**Gate field** — must be populated before Stage 5 → 6 transition.
Walkthrough Completed Date	Date (auto)	Set by A-RH-06 on FastField webhook receipt.
Approved Date	Date (auto)	Set by A-RH-07 when Walkthrough Status = Approved as Ready to Market.
Closed Date	Date (auto)	Set by A-RH-10 on Stage 9 transition.
Days In Rehab	Formula (Duration)	Rehab Identified Date → Approved Date. Drives SLA alerts: 7+ days past SLA → Ops Director alert (A-RH-12); 30+ calendar days without Completion → Austin escalation.

STEP 5 **Add scope, assignment & financial fields**

Field Name	Type	Required	Notes
Scope Notes	Text (multi-line)	Yes	**Gate field** — must not be blank before Stage 1 → Stage 2 transition.
Primary Assigned To	Text	No	Lead vendor or staff name. Receives notification from A-RH-03.
Assignment Type	Dropdown	No	Values: In-House | External Vendor | Mixed
Estimated Total Cost	Currency	Yes*	**Gate field** — must be > $0.00 before Stage 2 → Stage 3 transition (G-RH-02). Entered during scope assessment.
Budget — Interior	Currency	No	Optional category-level budget allocation.
Budget — Doors & Hardware	Currency	No	
Budget — Kitchen	Currency	No	
Budget — Bathrooms	Currency	No	
Budget — Utilities	Currency	No	
Budget — Exterior & Landscaping	Currency	No	
Budget — Other	Currency	No	
Actual Cost	Currency (formula)	Auto	Sum of Actual Cost across all linked Rehab Tasks. Auto-updates as tasks are completed.
Budget Variance	Currency (formula)	Auto	= Estimated Total Cost − Actual Cost. Positive = under budget; Negative = over budget.
Over Budget	Formula (Checkbox)	Auto	True if Actual Cost > Estimated Total Cost.

STEP 6 **Add walkthrough & metadata fields**

Field Name	Type	Notes
Walkthrough Status	Dropdown	Values: Approved as Ready to Market | Needs Additional Items | Not Ready | Vendor Needs to Finish. Set automatically by A-RH-06 on webhook receipt.
FastField Launch Link	URL (formula)	Pre-populated link to Rehab Walkthrough Punchlist form. Auto-generated by A-RH-05 with Community, Lot, and Rehab Record ID as URL parameters.
Record Created By	Text (auto)	QB user who created the record.
Last Updated	Date/Time (auto)	QB auto-stamp.

P3-S2 · Rehab Tasks Table (TK-RH)

Source: **WF002 Spec §4D — Child of Rehab Records. One record per work item.**

STEP 1

Create the Rehab Tasks table

In QB → Tables → + New Table. Name: `Rehab Tasks`. Child of Rehab Records — multiple tasks per rehab project.

STEP 2

Add all fields

Field Name	Type	Required	Notes
Task ID	Formula (Text)	Auto	Format: TK-RH-YYYY-#####. Auto on record creation.
Parent Rehab Record	Relationship → Rehab Records	Yes	Links task to parent rehab project.
Task Name	Text	Yes	Free-text description of the specific work item.
Category	Dropdown	Yes	Values: Interior | Doors & Hardware | Kitchen | Bathrooms | Utilities | Exterior | Other. Used for budget-vs-actual reporting.
Assignment Type	Dropdown	Yes	Values: In-House | External Vendor. Drives which assignment field is shown/required.
Assigned To (In-House)	Text	Conditional	Staff name. Shown/required when Assignment Type = In-House.
Assigned Vendor	Relationship → Vendors	Conditional	Shown/required when Assignment Type = External Vendor. Drawn from Vendors reference table. Filtered to Active vendors.
Vendor Contact	Text (lookup)	Auto	Auto-populated from linked Vendor record (Primary Contact field). Read-only on task record.
Assigned Date	Date	No	Date this task was assigned.
Due Date	Date	No	Expected completion. Used in overdue reporting and A-RH-12 SLA checks.
Status	Dropdown	Yes	**Gate field** — all tasks must be Complete before re-walkthrough scheduling (G-RH-05). Values: Not Started | In Progress | Complete | Blocked
Completion Date	Date	No	Set when Status changes to Complete.
Notes	Text (multi-line)	No	Context, blockers, or completion notes.
Estimated Cost	Currency	No	Per-task estimate at assignment. $1,234.56 format.
Actual Cost	Currency	No	Actual spend on completion. Rolled up to parent Rehab Record Actual Cost.
Cost Variance	Currency (formula)	Auto	= Estimated Cost − Actual Cost. Positive = under budget; Negative = over budget.

P3-S3 · Rehab Walkthrough Records Table (RW)

Source: **WF002 Spec §4E — Child of Rehab Records. One record per FastField submission.**

STEP 1

Create the Rehab Walkthrough Records table

In QB → Tables → + New Table. Name: `Rehab Walkthrough Records`. Child of Rehab Records. One record created per FastField Rehab Walkthrough Punchlist submission (via webhook).

STEP 2

Add header fields

Field Name	Type	Notes
Walkthrough Record ID	Formula (Text)	RW-YYYY-###. Auto on webhook receipt.
Parent Rehab Record	Relationship → Rehab Records	Required. Matched by Rehab ID from FastField payload.
FastField Submission ID	Text	UUID from FastField webhook. Stored for audit traceability.
Community	Relationship → Communities	Pre-populated from form header. Cross-checks parent record.
Lot	Relationship → Lots	Pre-populated from form header.
Submitted By	Text	Manager name as entered on FastField form.
Manager Email	Email	From FastField form field.
Walkthrough Date	Date	Date entered on form.

STEP 3

Add the 6 checklist sections (37 items × 2 fields each = 74 fields)

For each of the 37 checklist items, create TWO fields: **(1)** a Yes/No Checkbox field named `[Item Name]`, and **(2)** a File Attachment field named `[Item Name] – Photo` (optional). The exception: *Landscaping Owner* (Section F, item 5) has a Dropdown field instead of a Photo field.

Section	Items	Fields Per Item
A — Interior	Home Smells Clean; No Trash/Debris; Floors Swept/Mopped/Vacuumed; Cabinets/Counters/Appliances Cleaned; Blinds Installed/Clean/Working; Outlet/Switch Covers Installed; Interior Bulbs Working; Smoke Detectors Working; Bath/Toilets/Sinks Cleaned; Windows Cleaned	10 Checkboxes + 10 Photo fields = 20 fields
B — Doors, Hardware & Safety	Front Door Handle/Lock Good or Replaced; Deadbolt Works/Keys Labeled; Interior/Closet Doors Work; Windows Open/Close/Lock; Steps/Porch/Handrails Safe	5 Checkboxes + 5 Photo fields = 10 fields
C — Kitchen & Appliances	Refrigerator Clean/Working; Stove/Oven Clean/Working; Dishwasher/Range Hood Works; Sink/Faucet Works; No Leaks Under Sink; Cabinets/Drawers Work	6 Checkboxes + 6 Photo fields = 12 fields
D — Bathrooms & Plumbing	New Toilet Seat Installed; Toilet Flushes; Sink/Shower/Tub Work; No Leaks; Mirror/Vanity/Towel Bar Secure; Caulking Clean/Complete	6 Checkboxes + 6 Photo fields = 12 fields
E — Utilities & Vacant Home Check	Electric On/Staying On; Water On/Staying On; Heat/A/C Works; Toilets Flushed/Water Run in Sinks; Checked for Leaks/Odors/Pests/Vandalism	5 Checkboxes + 5 Photo fields = 10 fields
F — Exterior & Landscaping	Exterior Clean/Power Washed; Skirting Secure/Presentable; Yard Cleaned/Grass Cut/Weeds Handled; Landscaping Complete or Assigned (4 items with photos); Landscaping Owner (Dropdown: Maintenance/Manager/Vendor — no photo)	4 Checkboxes + 4 Photos + 1 Dropdown = 9 fields

STEP 4 Add calculated summary fields

Field Name	Formula	Display
Items Passed	Count of Yes responses across all 37 items	Numeric
Items Failed	Count of No responses across all 37 items	Numeric
Pass Rate	= Items Passed ÷ 37 × 100	Percentage — format: xx.x%
Photos Submitted	Count of photo attachment fields that are not null	Numeric

STEP 5 Add status & signature fields

Field Name	Type	Notes
Walkthrough Status	Dropdown (Required)	Values: Approved as Ready to Market | Needs Additional Items | Not Ready | Vendor Needs to Finish. Copied to parent Rehab Record by A-RH-06.
Inspector Signature	File Attachment (Signature)	Captured in FastField. Stored as image in QB record.

P3-S4 · Vendors QB Reference Table & Power Automate Integration

Source: **WF002 Spec §6 — SharePoint is the vendor master. QB consumes via Power Automate.**

STEP 1

Create the Vendors QB reference table

In QB → Tables → + New Table. Name: `Vendors`. This table is the QB-side of the SharePoint → QB sync. It is populated and kept current by Power Automate (not manual QB entry).

STEP 2

Add all fields

Field Name	Type	Notes
Vendor ID	Text	Primary key. Unique short code from SharePoint Vendor Master. Referenced in Rehab Tasks.
Vendor Name	Text	Legal or DBA name.
Trade Category	Dropdown	Values: Plumbing | Electrical | HVAC | Roofing | Flooring | Painting | General Contractor | Cleanup | Other. Drives vendor cascade filter on Rehab Tasks.
Primary Contact	Text	Contact name. Auto-populated via Power Automate from SharePoint.
Phone	Phone	Direct contact number.
Email	Email	Business email.
States Served	Multi-select	State codes (FL, GA, SC, NC, MA, WV, MI, AL). Used to filter vendor dropdown by community state.
Preferred Vendor	Checkbox (Yes/No)	Flags top-tier, pre-vetted vendors. Surfaced first in QB dropdown.
Active	Checkbox (Yes/No)	Inactive vendors hidden from QB dropdown cascades. Updated by Power Automate when SharePoint record is deactivated.
Insurance Expiry	Date	GL insurance expiration from SharePoint. Flagged when within 30 days.

STEP 3

Configure Power Automate flow (IT / QB Admin deliverable)

Create a Power Automate flow in the Parakeet 365 tenant:

- **Trigger:** SharePoint list item created or modified in: `Parakeet Communities → Operations → Vendor Master`
- **Action:** Upsert the corresponding QB Vendors record (match on Vendor ID). If record exists → update all fields. If not exists → create new record.
- **Deactivation:** When SharePoint Active = No → set QB Vendors Active = No.
- **Schedule:** Also configure a daily full-sync run at 5:00 AM ET as a safety net.

¡ SharePoint remains the source of truth. Never edit Vendor records directly in QB. All vendor master changes go through SharePoint and Power Automate syncs them to QB.

P3-S5 · FastField Form — Rehab Walkthrough Punchlist (37 Items)

Source: **WF002 Spec §5 — QB target: Rehab Walkthrough Records. Completed by: Community Manager / Inspector in field.**

STEP 1

Create the Rehab Walkthrough form in FastField

Name: `WF002 — Rehab Walkthrough Punchlist`. QB target: `Rehab Walkthrough Records`. Matching key: `Rehab ID` (RH-YYYY-###). Pre-populated from QB launch link: Community, Lot Number, Rehab Record ID.

STEP 2

Add header (metadata) section

Field	Type	Notes
WF002 Form ID (Rehab ID)	Text (auto)	Auto-populated from QB; links submission back to QB record.
Community	Text (auto)	Pulled from QB; read-only in field.
Lot Number	Text (auto)	Pulled from QB; read-only in field.
Inspector Name	Text (auto)	FastField user display name; auto-populated from login.
Inspection Date	Date	Defaults to device date; editable by inspector.
Unit Make / Model / Year	Text	Free entry to confirm the correct unit.

STEP 3

Build the 37-item checklist (6 sections)

Each item: Pass / Fail / N/A dropdown + optional Photo capture field + free-text Notes field. Items marked Fail automatically create Rehab Tasks in QB (via A-RH-05).

Section	Item Count	Key Scope Hints
Exterior (Items 1–8)	8	Roof condition; skirting & foundation; steps/landing; exterior walls; windows (exterior); doors (exterior); tie-downs/anchors; utility connections (exterior)
Interior — General (Items 9–18)	10	Floors living areas; walls & ceilings; windows (interior); doors (interior); light fixtures & switches; smoke/CO detectors; electrical panel; HVAC heating; HVAC cooling; water heater
Kitchen (Items 19–23)	5	Cabinets & countertops; sink & faucet; appliances; range hood/ventilation; GFI outlets — kitchen
Bathrooms (Items 24–28)	5	Tub/shower; toilet; vanity & sink; ventilation; flooring
Plumbing & Mechanical (Items 29–32)	4	Under-floor plumbing; main water line/shut-off; drainage/sewer connection; gas system
Safety & Cleanup (Items 33–37)	5	Hazardous materials observation; pest/rodent evidence; personal property/debris; lot cleanup required; overall cleanliness (1–5 estimate)

STEP 4 Add calculated summary and submission fields

Field	Type	Logic
Total Items Inspected	Calculated	COUNT of items where result ≠ N/A
Total Fails	Calculated	COUNT of items where result = Fail
Fail Rate %	Calculated	Total Fails ÷ Total Items Inspected × 100; display to one decimal
Recommended Disposition	Calculated	If Fail Rate > 60% → 'Full Rehab Required'; 30–60% → 'Partial Rehab'; < 30% → 'Minor Work Only'
Photo Count	Calculated	COUNT of photo fields with an attachment
Overall Walkthrough Status	Dropdown (Required)	Values: Approved as Ready to Market | Needs Additional Items | Not Ready | Vendor Needs to Finish. Inspector selects. Drives QB Walkthrough Status field.
Inspector Notes (General)	Long Text	Free-form summary; mapped to QB Walkthrough Notes.
Inspector Signature	Signature	Captured on-device; stored as image in FastField; URL pushed to QB.
Submission Timestamp	DateTime (auto)	Set by FastField on submit; mapped to QB Walkthrough Date.

STEP 5

Configure webhook to Rehab Walkthrough Records

Map all 37 checklist result fields, 37 photo fields, Walkthrough Status, Inspector Signature URL, and all header fields to corresponding QB fields. Confirm Walkthrough Status is copied to parent Rehab Record by A-RH-06.

P3-S6 · Cascading Dropdowns — WF002

Source: **WF002 Spec §8**

STEP 1

Primary cascade — Community → Lot (Rehab context)

On the Rehab Record form, Lot dropdown filters to: `Community = [selected Community]` AND `Lot Status Allows Rehab = Yes` (i.e., Lot-In Rehab or Lot status with Allows Rehab = Yes). This prevents creating Rehab Records for occupied lots.

STEP 2

Secondary cascade — Task Trade Category → Vendor

On the Rehab Tasks form: (1) User selects Trade Category. (2) Vendor ID dropdown filters to vendors where: `Trade Category = [selected Trade]` AND `States Served includes [Community State]` AND `Active = Yes`. Preferred Vendors appear first. Vendor Name auto-populates from lookup after Vendor ID is set.

STEP 3

Rehab Stage → Allowed Status cascade

Configure form validation: available Rehab Stage values are constrained to forward movement only (Gate G-RH-01 blocks backward movement). Task completion is blocked if Rehab Status = Rehab Identified or Walkthrough Scheduled.

P3-S7 · Automations A-RH-01 – A-RH-12

Source: **WF002 Spec §9 — 12 QB Pipelines automations. Build in order.**

ID	Trigger	Timing	Action
A-RH-01	Manual (PM/CM creates record), TBD Report, or Move-Out event	Immediate	Creates new Rehab Record with Rehab Stage = Rehab Identified. Sets Rehab Identified Date = today. Validates Community and Lot are provided. Sets Lot Status → Lot-In Rehab on linked Lot record. Sets Asset Status → Rehab in Process on linked Asset record.
A-RH-02	Rehab Stage changes to Scope Assessed	Immediate	Sets Scope Assessed Date = today. Sends notification to PM and Community Manager to complete scope assessment.
A-RH-03	Rehab Stage changes to Work Assigned	Immediate	Sets Work Assigned Date = today. Sends notification to Primary Assigned To (vendor or staff) with work order details and QB Rehab Record link.
A-RH-04	Rehab Stage changes to Work In Progress	Immediate	Sets Work Started Date = today. Notifies Ops team that active rehab has begun.
A-RH-05	Rehab Stage changes to Walkthrough Scheduled	Immediate	Generates pre-populated FastField Rehab Walkthrough launch URL with Community, Lot, and Rehab Record ID as parameters. Writes URL to FastField Launch Link field on Rehab Record. Sets Walkthrough Scheduled Date = today (or date manually set). Sends launch link to assigned inspector.
A-RH-06	FastField Rehab Walkthrough form submitted (webhook received)	On webhook receipt	Receives FastField webhook payload. Creates child Walkthrough Record in QB (Rehab Walkthrough Records table). Matches by Rehab ID. Sets Walkthrough Completed Date = today. Copies Walkthrough Status from form to Rehab Record. Routes: if Walkthrough Status = Approved as Ready to Market → triggers A-RH-07; otherwise → triggers A-RH-08.
A-RH-07	Walkthrough Status = Approved as Ready to Market (set by A-RH-06)	Immediate	Sets Rehab Stage → Approved – Ready to Market. Sets Approved Date = today. Sets Asset Status → For Sale on linked Asset record. Sets Lot Status → Lot-Avail(POH) on linked Lot record (confirm exact value per asset type at build). Sends listing handoff notification to Leslie and Tanya: 'Home at [Community] Lot [Lot] has been approved. Please complete a Listing Request Form.' Notification includes link to Listing Request form.
A-RH-08	Walkthrough Status ≠ Approved as Ready to Market (set by A-RH-06)	Immediate	Sets Rehab Stage → Items To Resolve. Creates follow-up Rehab Task records for each failed walkthrough item (one task per failed item). Assigns to Primary Assigned To. Notifies PM: 'Walkthrough for [Rehab ID] was not approved. [N] items require resolution.'
A-RH-09	All Rehab Tasks for a Rehab Record = Complete (checked by A-RH-08 monitor)	Immediate	When all tasks linked to the parent Rehab Record = Complete → notifies PM to re-schedule walkthrough. Sets Rehab Stage → Walkthrough Scheduled (triggers A-RH-05 to re-dispatch FastField form for re-inspection).
A-RH-10	Rehab Stage changes to Closed (Stage 9)	Immediate	Sets Closed Date = today. Confirms Final Actual Cost = sum of all linked Rehab Task Actual Cost fields. Record becomes read-only (lock all editable fields except admin override).

P3-S8 · Gate Rules — WF002

Source: **WF002 Spec §10 — 8 gate rules. All are hard stops.**

Gate ID	Gate Name	Transition	Condition / Error Message
G-RH-01	No Backward Status	Any → earlier Stage	Condition: New Rehab Stage has a lower stage sequence number than the current stage. Error: *'Status cannot move backward. Contact your administrator to revert if needed.'*
G-RH-02	Scope Notes Required	Rehab Identified → Scope Assessed	Condition: Scope Notes field is blank. Error: *'Scope Notes must be completed before advancing to Scope Assessed.'*
G-RH-03	Estimated Cost Required	Scope Assessed → Work Assigned	Condition: Estimated Total Cost is blank or $0. Error: *'Estimated Total Cost must be greater than $0 before work can be assigned.'*
G-RH-04	At Least One Task Required	Scope Assessed → Work Assigned	Condition: COUNT of Rehab Tasks linked to this Rehab Record = 0. Error: *'At least one Rehab Task must be created before advancing to Work Assigned.'*
G-RH-05	All Tasks Must Close	Work In Progress → Walkthrough Scheduled	Condition: COUNT of Rehab Tasks where Task Status ≠ Complete or Cancelled > 0. Error: *'[N] task(s) are still open. All tasks must be closed before scheduling the walkthrough.'*
G-RH-06	Walkthrough Date Required	Work In Progress → Walkthrough Scheduled	Condition: Walkthrough Scheduled Date is blank. Error: *'Walkthrough Scheduled Date must be populated before advancing to Walkthrough Scheduled.'*
G-RH-07	Walkthrough Required	Walkthrough Scheduled → Approved — Ready to Market	Condition: COUNT of Walkthrough Records linked to this Rehab Record = 0. Error: *'A completed walkthrough is required before the rehab can be approved.'*
G-RH-08	Occupied Lot Block	Record Creation	Condition: Selected Lot's current Lot Status category = Occupied (Lot Status Allows Rehab = No) at time of Rehab Record creation. Error: *'This lot is currently occupied. A rehab record cannot be created for an occupied lot.'*

PHASE 4

WF003 — Asset Disposition Review

SPEC V1.1 · DRAFT FOR REVIEW

6 stages · 2 QB tables · No FastField forms · 5 automations · 3 gate rules · 5 standard reports

2	0	5	3	5
QB Tables	FastField Forms	Automations	Gate Rules	Standard Reports

5
Disposition Values

ℹ WF003 is a QB-only workflow — no FastField forms. All data entry is in the QB web interface during or after the Monday meeting. The meeting recorder creates records in QB; automations fire immediately on save.

P4-S1 · Disposition Meetings Table (DM)

Source: **WF003 Spec §5A — Parent table. One record per Monday meeting.**

STEP 1

Create the Disposition Meetings table

In QB → Tables → + New Table. Name: `Disposition Meetings`. One record = one weekly Monday meeting.

STEP 2

Add all fields

Field Name	Type	Required	Notes
Meeting ID	Formula (Text)	Auto	Format: DM-YYYY-###. Auto-generated: 'DM-' & Text(Year([Date Created])) & '-' & Right('000' & [Record ID#], 3)
Meeting Date	Date	Yes	Date of the Monday meeting. Format: mm/dd/yy. Soft warning (not hard block) fires if date selected is not a Monday: 'This date is not a Monday. Asset Disposition meetings are typically held on Mondays. Confirm to proceed.'
Meeting Status	Dropdown	Auto/Yes	Values: Open | Closed. Defaults to Open on creation. Auto-set to Closed by A-DR-04 when all linked Disposition Items = Actioned or Closed.
Facilitator	User	Yes	QB user running the meeting — typically Asset Management lead.
Participants	Text (multi-line)	No	Names or roles of attendees beyond the facilitator.
Meeting Notes	Text (multi-line)	No	General meeting notes. Unit-specific notes go on individual Disposition Items.
Total Units Reviewed	Count (rollup)	Auto	Count of all linked Disposition Items. Auto-calculated.
Rehab Count	Count (rollup)	Auto	Count of linked Disposition Items where Disposition = Rehab.
Demo Count	Count (rollup)	Auto	Count where Disposition = Demo.
Turn for Sale Count	Count (rollup)	Auto	Count where Disposition = Turn for Sale.
Hold Count	Count (rollup)	Auto	Count where Disposition = Hold.
Created By	User (auto)	Auto	QB user who created the meeting record.
Created Date	Date/Time (auto)	Auto	Auto-stamped on record creation.

STEP 3

Configure soft warning for non-Monday dates

In QB → Disposition Meetings table → Forms → Meeting Date field settings: add a conditional warning rule: `IF DayOfWeek([Meeting Date]) ≠ 2 (Monday) THEN show warning: 'This date is not a Monday...'`. This is a warning only — allow save to proceed.

P4-S2 · Disposition Items Table (DI)

Source: **WF003 Spec §5B — Child of Disposition Meetings. One record per unit reviewed at a meeting.**

STEP 1

Create the Disposition Items table

In QB → Tables → + New Table. Name: `Disposition Items`. Child of Disposition Meetings (many items per meeting). This is where disposition decisions are recorded.

STEP 2

Add all fields

Field Name	Type	Required	Notes
Item ID	Formula (Text)	Auto	Format: DI-YYYY-###. Auto-generated.
Meeting	Relationship → Disposition Meetings	Yes	Links this item to the parent Monday meeting record (DM-YYYY-###).
Community	Relationship → Communities	Yes	Top of cascade. Filtered to active communities.
Lot	Relationship → Lots	Yes	Filtered dynamically to lots belonging to the selected Community. No status restriction — any recently vacated lot may be under review.
Asset	Lookup / Relationship	Yes	Filtered dynamically to assets on the selected Lot.
Lot Status at Review	Formula (Text)	Auto	Snapshot of the Lot's current Lot Status at time of review — pulled from linked Lot record. Read-only. Preserved even if Lot Status changes after the meeting.
Asset Status at Review	Formula (Text)	Auto	Snapshot of the Asset's current Asset Status at time of review. Read-only.
Disposition	Dropdown	Yes*	Values: (blank — Pending) | Rehab | Demo | Turn for Sale | Hold | No Action. Defaults to blank. Setting to a non-blank value triggers the appropriate automation. Required before advancing Item Status beyond Pending Review.
Disposition Notes	Text (multi-line)	Conditional	**REQUIRED when Disposition = Hold** (Gate G-DR-01). Must include reason for hold and expected re-review date. Optional for all other dispositions.
Assigned To	User	No	QB user responsible for following up (e.g., Ops rep who will initiate WF002).
Item Status	Dropdown (auto)	Auto	Values: Pending Review | Reviewed | Actioned | Closed. Defaults to Pending Review on creation. Set by automations — not manually.
Downstream Record ID	Text (auto)	Auto	Auto-populated by automation with ID of downstream record created — e.g., RH-2026-004 for a Rehab disposition. Empty for Hold and No Action.
Reviewed Date	Date (auto)	Auto	Auto-stamped when Item Status advances to Reviewed.
Actioned Date	Date (auto)	Auto	Auto-stamped when Item Status advances to Actioned.
Created By	User (auto)	Auto	QB user who created this Disposition Item.
Created Date	Date/Time (auto)	Auto	Auto-stamped on record creation.

STEP 3

Configure cascade dropdowns (Community → Lot → Asset)

Same cascade architecture as WF001 and WF002 (D-011). Community → Lot: filter to lots in selected Community. No status restriction on Lot or Asset for WF003 — any recently vacated unit may be reviewed. The Lot Status at Review and Asset Status at Review snapshot fields capture the current state automatically on record save.

P4-S3 · Automations A-DR-01 – A-DR-05

Source: **WF003 Spec §6 — 5 automations. All trigger immediately on save.**

ID	Trigger	Timing	Action
A-DR-01	Disposition Item saved with Disposition = Rehab	Immediate on save	**Primary downstream automation — creates WF002 Rehab Record.** Actions (in order): 1. Create new WF002 Rehab Record — pass Community, Lot, Asset, Meeting Date (from parent DM record), and Disposition Notes to the new Rehab Record. Triggered By = TBD Report (or set based on context). New Rehab Record ID auto-generated (RH-YYYY-###). 2. Update linked Lot record: Lot Status → Lot-In Rehab. 3. Update linked Asset record: Asset Status → Rehab in Process. 4. Update Disposition Item: Downstream Record ID = new RH-#### ; Item Status → Actioned; Actioned Date → today. Note: WF002 automation A-RH-02 then fires automatically on the new Rehab Record — it dispatches the FastField form link to the assigned inspector. WF003 recorder does not need to open WF002 separately.
A-DR-02	Disposition Item saved with Disposition = Demo	Immediate on save	Actions: 1. Update linked Lot record: Lot Status → Lot-Demo. 2. Update linked Asset record: Asset Status → To Be Demoed. 3. Update Disposition Item: Item Status → Actioned; Actioned Date → today. Note: No individual notification on Demo. All disposition outcomes communicated via meeting recap email (A-DR-04) when full meeting closes.
A-DR-03	Disposition Item saved with Disposition = Turn for Sale	Immediate on save	Actions: 1. Update linked Asset record: Asset Status → For Sale. 2. Update Disposition Item: Item Status → Actioned; Actioned Date → today. Note: No individual notification on Turn for Sale. All outcomes communicated via meeting recap email (A-DR-04).
A-DR-04	All Disposition Items for a Disposition Meeting = Actioned or Closed	Immediate (checked on each Item save)	Actions: 1. Update Disposition Meeting record: Meeting Status → Closed. 2. Send meeting recap email to full leadership group: Austin, Jon, John, Zach, Natalie, Leslie, Justin. Email subject: 'Asset Disposition Review — Meeting Recap — [Meeting Date]' Email body includes: total units reviewed; itemized list of all Disposition Items with Community / Lot / Asset / Disposition / Disposition Notes / Downstream Record ID (where applicable); meeting facilitator name. **Build phase action required:** Collect full email addresses for all 7 recipients before configuring this automation (O-WF003-004).

P4-S4 · Gate Rules — WF003

Source: **WF003 Spec §7 — 3 hard stops. No exceptions.**

Gate ID	Gate Name	Transition	Condition / Error Message
G-DR-01	Disposition Required Before Reviewed Status	Pending Review → Reviewed (or beyond)	Condition 1: Item Status cannot be set to Reviewed or beyond unless Disposition is set to a non-blank value. Error: *'A disposition decision must be recorded before marking this item as Reviewed.'* Condition 2 (additional rule): When Disposition = Hold, the Disposition Notes field is required. Error: *'Disposition Notes are required when Disposition = Hold. Please enter the reason for the hold and the expected re-review date.'*
G-DR-02	All Items Must Be Actioned or Closed Before Meeting Can Close	Open → Closed (on Meeting record)	Condition: Disposition Meeting Status cannot be manually set to Closed if any linked Disposition Item = Pending Review or Reviewed. Meeting closure is auto-handled by A-DR-04 only. Error: *'Meeting cannot be closed while [N] item(s) remain unactioned. All items must reach Actioned or Closed status first.'* Note: Disable the manual Meeting Status field edit for all roles except Sys Admin. Closure is automation-only.
G-DR-03	Block Duplicate WF002 Rehab Record	Record Creation (Disposition Item)	Condition: If a recorder attempts to create a Disposition Item for a Lot/Asset that already has an active (non-Closed) WF002 Rehab Record, QB blocks the save. Error: *'This unit already has an active Rehab record in progress ([RH-ID]). A new Disposition Item cannot be created until the existing Rehab record is closed. Contact Ops if an exception is required.'* Secondary rule: No duplicate non-Closed Disposition Items for the same Lot within the same meeting. Recorder must close or remove the existing item first. Future build: Replace hard block with exception approval workflow (recorder requests override → Ops Director approves).

P4-S5 · Standard Reports (5 reports)

Source: **WF003 Spec §9 — All QB-native reports.**

STEP 1 **Create all 5 standard reports in QB**

Report Name	Filter / Scope	Columns to Display	Primary User
This Week's Meeting	Disposition Meeting where Meeting Date = current week. Shows linked Disposition Items.	Item ID, Community, Lot, Asset, Lot Status at Review, Asset Status at Review, Disposition, Disposition Notes, Item Status, Downstream Record ID	Meeting Recorder — default view for Monday meeting
All Open Meetings	Disposition Meetings where Meeting Status = Open	Meeting ID, Meeting Date, Facilitator, Total Units Reviewed, Rehab Count, Demo Count, Turn for Sale Count, Hold Count	Ops — confirm no meeting has outstanding unactioned items
Disposition History by Community	All Disposition Items. Group by Community. Filter by date range and disposition type (user-selectable).	Item ID, Meeting Date, Community, Lot, Asset, Disposition, Disposition Notes, Item Status, Downstream Record ID	Asset Management — portfolio-level reporting
Rehab Pipeline Source	All Disposition Items where Disposition = Rehab. Links through to associated WF002 Rehab Records.	Disposition Date, Community, Lot, Asset, Downstream Record ID (links to RH record), Current WF002 Stage	Ops / Asset Management — track all rehab-originated items
Pending Items (Unactioned)	All Disposition Items where Item Status = Pending Review or Reviewed	Item ID, Meeting Date, Community, Lot, Asset, Disposition, Item Status	Ops — identify stalled items. Expected to be empty at end of each meeting week.

PHASE 5

Cross-Workflow Connections & Testing

BUILD LAST — REQUIRES ALL THREE WORKFLOWS TO BE COMPLETE

WF003 → WF002 wire-up · Shared reference dependencies · End-to-end testing checklists

P5-S1 · WF003 → WF002 Integration Wire-Up

Source: **WF003 Spec §6 A-DR-01 · WF002 Spec §2 Trigger Logic**

The WF003 → WF002 integration is the critical cross-workflow connection. When a Disposition Item is saved with Disposition = Rehab, Automation A-DR-01 must create a fully formed WF002 Rehab Record at Stage 1 and trigger WF002's own notification chain (A-RH-02). The WF003 recorder never touches WF002 manually.

STEP 1

Verify A-DR-01 creates valid WF002 Rehab Records

In QB Pipelines → A-DR-01: confirm the 'Create Record' action in the Rehab Records table. Verify all required fields are passed: Community (from Disposition Item), Lot (from Disposition Item), Asset (from Disposition Item), Rehab Stage = Stage 1 (Rehab Identified), Triggered By = TBD Report (or applicable value), Rehab Identified Date = today, Disposition Notes → Scope Notes (if applicable).

STEP 2

Verify A-DR-01 triggers WF002's A-RH-01 chain

After A-DR-01 creates the Rehab Record, WF002 automation A-RH-01 should fire automatically (triggered by the new Rehab Record creation event). Confirm: Lot Status updates to Lot-In Rehab; Asset Status updates to Rehab in Process; WF002 notification goes to the assigned inspector.

STEP 3

Verify Downstream Record ID is populated on the Disposition Item

After A-DR-01 fires, the Disposition Item's Downstream Record ID field should contain the new Rehab Record ID (e.g., RH-2026-004). Verify this is populated correctly. This is the audit link between WF003 and WF002.

STEP 4

Test the full path: WF003 meeting → WF002 Rehab Record creation

Test scenario: (1) Create a Disposition Meeting (DM-2026-001). (2) Add a Disposition Item for a known vacant lot. (3) Set Disposition = Rehab. (4) Save. Confirm: Disposition Item Item Status = Actioned; Downstream Record ID = RH-2026-XXX; Lot Status on linked Lot = Lot-In Rehab; Asset Status = Rehab in Process; New Rehab Record exists in WF002 at Stage 1; WF002 notification chain triggered.

P5-S2 · Move Out Integration Points

Source: **WF002 Spec §2 Trigger Logic · WF003 Spec §8**

ℹ The Move Out workflow is not yet built. These are documented integration points for when it is built.

Integration Point	Behavior When Built	Current Workaround
Move Out → WF002 trigger	A completed Move Out where disposition = Rehab auto-creates a WF002 Rehab Record. Move Out workflow passes Lot ID, Asset ID, and Community to the new Rehab Record.	Ops team or Community Manager manually creates the Rehab Record in QB (Manual trigger). Set Triggered By = Move Out and enter Source Move Out Record # manually.
Move Out → WF003 agenda pre-population	A completed Move Out sets Asset Status to TBD or Needs Rehab. WF003 recorder sees the status change and adds the unit to the next meeting's Disposition Items manually.	Already the current process — Move Out sets status change; recorder adds to next meeting agenda manually. No automation change needed at this time.
Move Out → Lot Status	LS-4 automation: Move Out processed → Lot Status: Occupied → Available ('Lot').	LS-4 is already built (Phase 2, P2-S14). Confirm it fires correctly when Move Out record is processed in QB.

P5-S3 · Shared Reference Table Dependencies Map

This map shows which tables are shared and which automations write to them. Use this to avoid redundant configuration and identify points of potential conflict.

Shared Table	Read By	Written By (Automations)
Communities	WF001 (cascade), WF002 (cascade), WF003 (cascade)	None – read-only. Updated manually by Sys Admin when community data changes.
Lot Status Reference	WF001 (cascade filters), WF002 (cascade filters)	None – read-only lookup. Values are fixed (16 records created in Phase 1).
Asset Status Reference	WF002 (cascade filters), WF003 (cascade filters)	None – read-only lookup. Values are fixed (25 records created in Phase 1).
Lots (Lot Status field)	WF001 cascade, WF002 cascade, WF003 cascade	WF001: LS-1, LS-2, LS-3, LS-4, LS-5, LS-6; WF002: A-RH-01 (→ Lot-In Rehab), A-RH-07 (→ Lot-Avail(POH)); WF003: A-DR-01 (→ Lot-In Rehab), A-DR-02 (→ Lot-Demo)
Asset records (Asset Status field)	WF002 cascade, WF003 cascade	WF002: A-RH-01 (→ Rehab in Process), A-RH-07 (→ For Sale); WF003: A-DR-01 (→ Rehab in Process), A-DR-02 (→ To Be Demoed), A-DR-03 (→ For Sale)

🔴 Multiple automations write to Lot Status and Asset Status on the same records. Confirm there are no conflicting pipelines writing to the same record at the same time. QB Pipelines run sequentially per record trigger – verify ordering is correct in the Pipeline configuration.

P5-S4 · End-to-End Testing Checklists

WF001 – Home Ordering End-to-End Test

Test #	Test Scenario	Expected Result	Pass / Fail
T1-01	Create new Home Order for an Available lot	Lot Status → Reserved (LS-1). Stage = Infill Need Identified. Stage 1-2 tasks created (A1).	☐
T1-02	Advance stage to Home Selected	Stage 3-4 tasks created (A2). Sales and Accounting notified.	☐
