Parakeet Communities

QB + FastField Build Rollout — Team Overview

Proposed build sequence for the full QB + FastField operating system — for team review and input

VERSION	PREPARED	WORKFLOWS	BUILD WAVES
v1.1 — For Review	August 2026	46 Total	8 Waves

This document outlines the proposed rollout sequence for building Parakeet's full operations system in QuickBase (QB) and FastField. It is being shared with the team prior to finalizing the plan so everyone can weigh in on order, priority, and anything that may be missing before we commit to a build sequence.

The system covers **46 workflows** spanning every department — Operations, Construction, Sales, Legal, Accounting, Acquisitions, and HR. Five workflows are already specced or in progress (**Home Ordering, Rehab, TBD Process, Move Out, and Listings**). The remaining 41 are organized into **8 build waves** in the proposed order below.

Why does order matter? Many workflows depend on data created by earlier ones. A Collections record, for example, needs to look up a Resident — which means Resident records have to exist first. The order

below is designed to ensure no workflow has to be rebuilt later because a dependency was missed. That said, we want your input before locking this in.

46	5	8	18
TOTAL WORKFLOWS	ALREADY SPECCED	BUILD WAVES	FASTFIELD FORMS

What's Already In Progress

✓ WAVE 0 – COMPLETE OR IN PROGRESS

WF001	WF002	WF003	WF004	WF006
Home Ordering	Rehab Management	TBD Process	Move Out	Listings
LOCKED v1.2	LOCKED v1.3	LOCKED v1.1	DRAFT v1.0	DRAFT v1.0

What We've Already Built – Wave 0

Before the proposed wave plan kicks off, the team has already put in significant design and architecture work. The five workflows below form the operational core of the system. Three are fully **LOCKED** – design is complete, spec is

Home Ordering, Delivery & Set

WF001 ✓ LOCKED V1.2

12	7	4	14	9
STAGES	QB TABLES	FF FORMS	AUTOMATIONS	GATE RULES

✓ WHAT'S BUILT & LOCKED

- **Two-stage sequential FastField inspection** is fully specced: Construction Inspection (89 items across 7 sections) must be completed and submitted before the Ops/Sales Readiness Inspection (71 items, 10 sections) can even open. There's no way to skip or reorder this in the system.
- **Hard gate rules enforced by QB automation** — CMs cannot manually advance a home to the next stage. Every status change is triggered by the system when all gate conditions are met. No manual overrides.
- **Lot Prep gate**: WF026 (Lot Prep) must pass its inspection before a new home order can be placed. The system blocks ordering if the lot hasn't cleared.
- **Automatic downstream handoffs**: on set completion, WF027 (Utility Activation) is triggered automatically. Any punch-list failures during inspection auto-generate a WF002 Rehab record.
- WF001 is the most upstream workflow in the entire OS — it creates the Asset record every other workflow reads from. It goes first for a reason.

Rehab Management

WF002 ✓ LOCKED V1.3

9	5	1	12	8
STAGES	QB TABLES	FF FORM	AUTOMATIONS	GATE RULES

✓ WHAT'S BUILT & LOCKED

- **Tiered bid approval is fully locked**: under $2,500 = no approval needed; $2,500–$5,000 = Regional Manager must approve in QB; over $5,000 = Austin signs off. No contractor starts work without the right approval in the system.
- **Full financial tracking** across 7 budget categories with actual cost rollup and variance tracking. Budget vs. actual is visible in QB in real time throughout the rehab.
- **SLAs are enforced**: 3-business-day walkthrough from trigger, 5-business-day task completion, 30-calendar-day cap for the full project. SLA breaches auto-escalate to the Regional Manager.
- **Photo documentation**: before, during, and after photos are stored as QB attachments and pushed to SharePoint automatically. No manual uploads.
- **Listing team auto-notification**: the moment Rehab Status = Complete, Leslie and Tanya receive an automatic notification to begin the WF006 listing process. No one has to remember to tell them.

WF003 **TBD Process** ✓ LOCKED V1.1

2	5	3
QB TABLES	AUTOMATIONS	GATE RULES

✓ WHAT'S BUILT & LOCKED

- **Weekly Monday meeting trigger**: QB automatically surfaces all homes eligible for the decision meeting each week. No one has to manually pull a list or remember which homes are pending.
- **Three disposition paths are fully mapped**: Rehab (triggers WF002), Demo (triggers WF025 Demo to Infill), Turn for Sale (triggers WF006 Listings). Each downstream workflow kicks off automatically on decision.
- **Hold is a hard block**: placing a home on Hold requires Disposition Notes (minimum 10 characters). No automation fires, no next step runs, until the Hold is cleared. This prevents decisions from falling through the cracks.
- **Single leadership recap email** is sent automatically when the meeting is closed — no one has to write or distribute a manual summary.
- QB record IDs: Decision Meetings use *DM-YYYY-###* format; Decision Items use *DI-YYYY-###*.

WF004 **Move Out**

✍️ DRAFT V1.0

2	1	3	5
QB TABLES	FF FORM	TRIGGERS	OPEN ITEMS

✓ WHAT'S DESIGNED & LOCKED IN

- **Three move-out triggers** all feed the same workflow path: voluntary resident notice, lease non-renewal, and eviction outcome. One process, three clean entry points — no separate workflows for each.
- **FastField Move Out Inspection Form**: completed by the CM on-site. Regional Manager approves or rejects inside FastField (not in QB). The **48-hour inspection SLA** from move-out date is locked — that's not one of the open items.
- **Inspection storage**: results save directly to SharePoint; QB stores the SharePoint link and inspection date. QB is not the document store here — SharePoint is.
- **RM sync**: Move Out records come from RM to QB via a daily 6 PM ET batch CSV import. QB reads from RM; it never writes financial data back.
- QB record IDs: Move Out Records use *MO-YYYY-###* format, linked to the Move Out Inspections table.

⚠ 5 OPEN ITEMS — NEED ANSWERS BEFORE THIS CAN LOCK

O-WF004-001	RM column mapping — which RM columns feed which QB fields in the daily sync
O-WF004-002	Inspection checklist items — full line-item list for the FastField Move Out form
O-WF004-003	FastField approval routing detail — exact approval-chain configuration inside FastField
O-WF004-004	SharePoint destination path — which folder/site inspection results are saved to
O-WF004-005	Rejected form correction flow — what happens when the Regional rejects the FastField form

Listings

WF00 ✍ DRAFT V1.0

2	1	6	4	5
QB TABLES	FF FORM	AUTOMATIONS	GATE RULES	OPEN ITEMS

✓ WHAT'S DESIGNED & LOCKED IN

- **Full listing lifecycle mapped**: Request Submitted → Under Review → Active → Price Reduced → Pending Offer → Closed. Six stages, each with defined gate requirements before status can advance.
- **FastField Listing Request Form**: CM-completed (15 fields across 5 sections). This fires when WF002 Rehab is complete or when WF003 TBD Process sets disposition = Turn for Sale.
- **Leslie and Tanya own the review step** and set Official Price, Listing Date, and Listed By directly in QB. A gate rule enforces this: no status change to Active is allowed until both Official Price and Listing Date are entered.
- **Price is frozen while Pending Offer**: gate rule blocks any listing changes while an offer is in review. Protects the offer process from mid-review edits.
- **RM sync**: active listing data pushes daily at 6 PM ET to RM via batch CSV to RM User Defined Fields (UDFs).
- QB record IDs: Listing Records use *LST-YYYY-###*, Price History records use *PH-YYYY-###*.

⚠ 5 OPEN ITEMS — NEED ANSWERS BEFORE THIS CAN LOCK

O-WF006-001	Listing platforms — which platforms listings go live on (MHVillage, Zillow, Craigslist, etc.)
O-WF006-002	RM UDF field names — exact names of the RM User Defined Fields that receive the daily sync
O-WF006-003	RM Listing Status allowed values — what values RM accepts in

the Listing Status field

O-WF006-004 SharePoint folder structure — where photos and marketing materials are stored per listing

O-WF006-005 Listing review SLA — how long Leslie / Tanya have to act on a new request before escalation

▲ What We Need to Resolve Before Wave 1 Can Begin

WF004 (Move Out) and WF006 (Listings) each have 5 open items — 10 total. These are not design problems, they're information gaps: specific decisions that need answers from the team. **WF004 must lock before Wave 1** (Resident Lifecycle) can be built, because WF005 Move In is triggered directly by a completed Move Out. **WF006 needs to lock before Wave 2** (Asset Sales Pipeline) begins, since Wave 2 picks up exactly where Listings hands off.

WF004 — MOVE OUT (5 ITEMS)

O-WF004-001 RM column mapping for daily sync

O-WF004-002 Move-out inspection checklist line items

O-WF004-003 FastField approval chain configuration

O-WF004-004 SharePoint destination folder path

O-WF004-005 Rejected form correction / resubmission flow

WF006 — LISTINGS (5 ITEMS)

O-WF006-001 Listing platform destinations

O-WF006-002 RM UDF field names for daily sync

O-WF006-003 RM Listing Status allowed values

O-WF006-004 SharePoint marketing folder structure

O-WF006-005 Listing review SLA (Leslie / Tanya)

How We Organized the Build Order

1

Field Team First

Waves 1–4 prioritize workflows that CMs, RMs, and construction staff touch every day — move-ins, site visits, inspections, and maintenance. High daily visibility = faster adoption.

2

Dependencies Drive Order

You can't build a Collections workflow before Resident records exist. Each wave creates the data the next wave needs, so nothing has to be rebuilt due to a missed dependency.

3

Shared Tables Are Pre-Work

Five core data tables (Residents, Lease Records, Work Orders, Title Records, Utility Accounts) must be built before Wave 1. Every workflow reads from at least one of them.

4

Revenue Protection Follows Field

Collections, Stipulations, and Evictions (Wave 5) are high-stakes workflows that build on the resident and field data established in Waves 1–4. Legal teams get a fully integrated system.

Proposed Build Waves

PRE

Pre-Work — Shared Data Tables

Before any workflow can be built, these five reference tables must exist in QB. Every workflow in Waves 1–8 reads from at least one of them. This is foundational infrastructure, not a workflow itself.

QB SETUP

TABLE	WHAT IT STORES	FEEDS INTO
Residents	Active & former resident records	21 workflows — the single most critical table
Lease Records	Lease terms, state, rent, status	Move In, Collections, Evictions, Rent Increases
Work Orders	Repair and maintenance tasks	Rehab, Site Visits, Inspections, Month End
Title Records	Home ownership, lien status, HUD labels	Evictions, Home Sales, Title Transfers
Utility Accounts	Utility accounts per home/lot	Utility Activation, Recapture Reporting, Acquisitions

WAVE
1

Resident Lifecycle

The first workflows to build after WF004 (Move Out) is locked. These create the Resident and Lease records that every downstream workflow depends on. Without Move In records, nothing else can look up a resident.

QB + FASTFIELD 3 WORKFLOWS

WF #	PROCESS	DESCRIPTION	FORM TYPE
WF005	Move In	New resident setup — lease execution, lot assignment, key issuance, RM record creation. Triggered by WF004 Move Out (vacancy) or WF007 Offer to Purchase (new sale). FastField move-in inspection form captured on-site.	FastField
WF015	Resident Information Sheet	Resident contact and household data collection at move-in. Feeds the Residents table with vehicles, pets, occupants, emergency contacts, and consent records. Replaces paper intake forms.	FastField
WF016	Lease Renewal	Annual and mid-term lease renewal workflow. QB tracks renewal offer, resident response, and new lease term. State-specific notice periods built in. Updates Lease Records table on completion.	QB Only

WAVE
2

Asset Sales Pipeline

Picks up where Listings (WF006) leaves off — from offer received through closing and title transfer. Completes the full listing-to-closed arc and handles both new-home sales and existing Parakeet-owned home sales. Requires WF006 locked and Title Records table built.

QB ONLY | 4 WORKFLOWS

WF #	PROCESS	DESCRIPTION	FORM TYPE
WF007	Offer to Purchase / Rent	Triggered when WF006 receives an offer. Tracks offer terms, financing type (cash / dealer loan / in-house), and AMRENT background check. Approved offer triggers Home Closing; rejected returns listing to Active.	QB Only
WF022	Home Closing Process	Full closing checklist: title search, lien clearance, HUD label verification, settlement statement. QB tracks all milestones; closing package uploaded to SharePoint. Triggers WF023 (POH sale) or WF005 (rental/LTP).	QB Only
WF023	POH Sales Title Transfer	Parakeet-owned home title transfer to buyer. Coordinates state DMV/HCD filings. QB tracks document submission and recorded title receipt. Asset status auto-updates to "Sold" on confirmation.	QB Only
WF024	Asset Title Transfer & Title Work	All non-sale title transfers: estate, deceased owner, abandoned home, lender repo, and mid-portfolio corrections. Tracks document submissions and state agency responses. Works with Vector Law or FL Fast Title.	QB Only

WAVE
3

Field Operations & Construction

The highest FastField usage wave — these are the workflows CMs and construction staff interact with most. Site visits, weekly maintenance, rental inspections, utility activation, demo, and lot prep. Building these early drives field-team adoption of the whole system.

HEAVY FASTFIELD | 7 WORKFLOWS

WF #	PROCESS	DESCRIPTION	FORM TYPE
WF008	Community Site Visit Inspection	Regional Manager monthly site visit checklist: grounds, signage, amenities, infrastructure, common areas. Items rated "Repair" auto-generate Work Orders in QB. PDF report saved to SharePoint. 30-day follow-up auto-triggered for open items.	FastField
WF009	Weekly Maintenance Checklist	CM-completed FastField form weekly: pool/spa, gates, common area equipment, generator, water systems. Repair items auto-generate Work Orders. Feeds into monthly equipment rollup (WF010).	FastField
WF010	Monthly Equipment & Inventory	Monthly FastField form: full equipment inventory, PPE stock, chemical supplies, capital equipment condition. QB rolls up from weekly records. Flagged shortfalls auto-generate procurement or repair Work Orders.	FastField
WF025	Demo to Infill	Triggered by WF003 when disposition = Demo. Tracks 4 phases: Pre-Demo Approval, Demolition, Lot Clearance, Infill Prep. Includes permit coordination by state. Connects to WF026 (Lot Prep) and WF001 (new home ordering) on completion.	QB Only

WF026	Lot Prep	Prepares the lot between home removal and new delivery: utility stub-outs, concrete pad, underpinning, ground leveling. FastField before/after inspection form. Gates WF001 Home Ordering (lot must pass before ordering is allowed).	FastField
WF027	Utility Activation	Physical and account-level utility verification before any home goes live. FastField form captures meter reads and provider confirmations. Two paths: New Home (triggered by WF001 Stage 8) and Rehab (triggered by WF002 completion).	FastField
WF028	Rental Inspections	Annual inspection of community-owned rental homes: interior (kitchen, bath, HVAC, appliances, flooring) and exterior (siding, skirting, steps, roof). Poor/Fail items auto-generate WF002 Rehab or Work Order based on severity.	FastField

WAVE
4

Compliance & Legal

Compliance workflows are largely field-adjacent and calendar-triggered, making them a natural follow-on to Wave 3. Violations connect to the Residents table (built in Wave 1). License/permit and insurance renewals are simpler to build because they run on a calendar, not events. Can run partially in parallel with Wave 3.

QB + FASTFIELD 5 WORKFLOWS

WF #	PROCESS	DESCRIPTION	FORM TYPE
WF013	Incident Report	Property-level incidents: injuries, property damage, emergency infrastructure, break-ins, environmental issues. FastField form submitted by CM immediately at incident. Auto-routes to Regional Manager and DOO. Elevated incidents flagged to legal. Replaces JotForm incident reports.	FastField
WF029	Violation Process	Lease and community rules violations: parking, pets, noise, property condition, unauthorized occupants. Progressive discipline: 1st notice → 2nd notice → legal action. Cure period tracked by violation type. Uncured violations trigger WF019 Eviction.	QB Only
WF030	License & Permit Renewals	Calendar-triggered: MH community licenses, business licenses, pool permits, electrical, water/sewer permits by state. QB sends 90/60/30/14/7-day reminders. Expired license = hard block flagged to leadership.	QB Only
WF031	Fair Housing Annual Traini-		

	ng	Tracks annual Fair Housing training completion for all CMs, RMs, and staff. QB record per employee per year with completion date, provider, and certificate number. Auto-escalates to HR if incomplete 14 days before deadline.	QB Only
WF032	Insurance Renewals	Tracks all property and liability policies by community: carrier, policy number, coverage type, premium, expiration. 90-day and 30-day reminders to Asset Management. COI uploaded to SharePoint per renewal. Links to WF013 for claims tracking.	QB Only

WAVE
5

Revenue Protection — Collections & Legal

Collections, Stipulations, Evictions, Post-Eviction Title, and Rent Increases. These workflows carry the highest financial stakes but require the full resident and field data layer to work correctly. Building on top of an established system means the team is already comfortable with QB before the most complex workflows go live.

QB ONLY | 5 WORKFLOWS

WF #	PROCESS	DESCRIPTION	FORM TYPE
WF017	Collections / AR	Monthly collections workflow. QB auto-calculates cure period deadline from state on Lease record (FL 5 bd, SC 5 days, GA 3 bd, NC 10 days, MA 30 days). Demand notices coordinated through Ops. If not cured: triggers Stipulation (WF018) or Eviction (WF019).	QB Only
WF018	Stipulation Process	Payment plan agreement when a resident cannot pay in full. Regional Manager approval required. QB tracks the full payment schedule and compliance. Missed payment auto-triggers escalation to WF019 Eviction.	QB Only
WF019	Eviction Pipeline	27 steps across 5 phases. Roles: CM/DM, Evictions Team, Regional Manager, DOO, Asset Management, Attorney. POH vs. rental path diverge post-filing. QB tracks all filing, hearing, and writ dates by state. Lot Status auto-updates via automation. Triggers WF020 on writ granted for POH.	QB Only
WF020	Post-Eviction Title Proc-		

	ess	Triggered by WF019 when writ of possession is granted on a POH home. Liened path (Vector Law) vs. non-liened path (FL Fast Title). QB tracks title status through Title Records table. Connects to WF003 TBD Process once title clears.	QB Only
WFO21	Rent Increase & Tax Pass-Throughs	State-specific notice requirements: FL Ch. 723 (90-day), GA (60-day), NC/SC (60-day), MA (most restrictive). QB auto-calculates notice deadline from the current date and state rule. Regional Manager approval required before any notices are sent. RM billing schedule updated post-approval.	QB Only

WAVE
6

Accounting & Financial Operations

Most accounting workflows depend on resident-level data (security deposits, utility recapture) or asset-sale data that comes from earlier waves. Month End Close Out is the integrating workflow — it reads from Work Orders, Listings, and Lease Records. Note: RM remains the system of record for all financial data; QB tracks workflow status and operational metrics only.

QB ONLY | 6 WORKFLOWS

WF #	PROCESS	DESCRIPTION	FORM TYPE
WF011	Month End Ops Close Out	Monthly QB rollup: open Work Orders, active rehabs, listing status, move-in/move-out counts, eviction status, open collections. CM/RM/Regional sign-off. Generates a month-end summary record per community. Connects to Financial Reporting (WF037).	QB Only
WF033	AP / Avid Exchange	Invoice receipt, GL coding, approval routing, and Avid Exchange submission. Approval tiers: <$2,500 = Regional; $2,500–$5,000 = Director; >$5,000 = Austin. Approved invoices pushed to Avid Exchange queue automatically.	QB Only
WF034	Security Deposit Refund	Triggered by WF004 Move Out. QB tracks refund request: resident lookup, deposit amount (from RM sync), deductions, final refund amount, approval status. Regional Manager approval required for any deductions. State-specific refund timelines enforced.	QB Only
WF035	Utility Recapture		

	Reporting	Tracks utility billing vs. resident recapture for sub-metered and RUBS communities. QB produces monthly recapture report per community: total billed, total collected, variance. Flags communities where utility costs exceed recapture. Feeds WF037.	QB Only
WF036	Home Lender Repo Process	When a resident defaults on their manufactured home loan. QB tracks repo notice date, lender contact, and home status. If Parakeet acquires title: triggers WF024. If lender removes the home: triggers lot status update and WF025/WF001 path.	QB Only
WF037	Financial Reporting (P&L / Rent Roll / Quarterly)	QB dashboards pulling from Lease Records (rent roll), Work Orders (maintenance costs), Rehab Records (capex), Listing Records (sales pipeline), Collections (delinquency). Operational-metric overlay for leadership. No financial data written back to RM from this workflow.	QB Only

WAVE 7

Acquisitions & New Community Onboarding

Acquisitions workflows bring new communities into the system — they feed all prior waves by populating Communities, Lots, and Residents records for newly acquired properties. They don't depend on day-to-day operational data, so they can be specced in parallel with Waves 4–6. The Acquisitions Transition workflow (WF039) is the most complex single workflow in the entire OS — it touches every shared table.

QB + FASTFIELD | 4 WORKFLOWS

WF#	PROCESS	DESCRIPTION	FORM TYPE
WF038	Due Diligence & Acquisition	Multi-department DD process: Legal (title search, HUD label verification), Finance (rent roll, operating statements), Construction (infrastructure audit), Ops (management assessment). QB tracks task status per department. FastField on-site infrastructure inspection form included. Gate: DD cleared → Austin approval → WF039.	FastField
WF039	Acquisitions Transition	Full community takeover: staff, systems, residents, vendors. QB creates: new Community record, all Lot records, initial Resident records (from RM import), and Utility Account records. FastField transition inspection per lot. Connects to WF040, WF005, and WF027. Most complex workflow in the OS — touches every shared table.	FastField
WF040	Utility Onboarding (Acquisitions)	MH-specific utility setup for new communities: sub-metering installation, master-meter conversion, RUBS setup. Reads and populates Utility Accounts table for the new community. Coordinates account name changes with providers. Connects to WF027 and WF035.	QB Only

WF041	Acq-OPS Transition Recaps	Post-acquisition handoff from Acquisitions to Operations. QB record: 90-day recap of outstanding transition items, committed repairs, pending title issues, and utility changes. Regional Manager is assigned to the new community at this stage. First site visit (WF008) triggered within 30 days of close.	QB Only

WAVE
8

HR, Training & Operational Cadence

HR, training, and cadence workflows support the team that runs every other workflow — they don't depend on operational data and don't block any core process. Wave 8 means "build last," not "unimportant." Manager Onboarding (WF042) should be ready before any new CMs start, and Prospect Screening (WF045) needs to be live before Offer to Purchase (WF007) goes fully active.

QB ONLY · 5 WORKFLOWS

WF #	PROCESS	DESCRIPTION	FORM TYPE
WF042	Manager Onboarding	New CM/RM onboarding checklist in QB: system access setup (RM, QB, FastField, Teams, SharePoint), keys/codes, property walkthrough, training completion. 30/60/90-day milestone check-ins. Connects to WF031 Fair Housing training record creation.	QB Only
WF043	Team Onboarding & Training Tracking	Broader training log covering all staff and all training programs. QB record per training event per employee. Connects to WF031 (Fair Housing) and WF042 (Manager Onboarding). Compliance training completion tracked for legal audit purposes.	QB Only
WF044	Property Business Plan	Monthly/quarterly community business plan: occupancy targets, revenue goals, capex priorities, delinquency thresholds. CM and Regional Manager complete in QB. Live data from Lease Records, Work Orders, and Listings pre-populates key metrics. Regional approval before submission to leadership.	QB Only
W-			

WF045	Prospect Screening & Background Check	Initiated with WF007 Offer to Purchase. QB tracks AMRENT order status, results, and approval/denial decision. Denial requires documented reason for Fair Housing compliance. Approved: WF007 next step; Denied: WF007 rejected path returns to Active Listing.	QB Only
WF046	Online Loan Application	Parakeet in-house financing or lender referral process. QB tracks loan application status: submitted, under review, approved, denied. Reads Offer record from WF007. Connects to WF022 Home Closing on approval. Denial returns to WF007 for cash or alternative financing.	QB Only

Questions or feedback? Bring to the review session before this plan is finalized.
