INTERNAL BUILD SPECIFICATION

WORKFLOW #003 · ASSET DISPOSITION REVIEW

Asset Disposition Review

Quickbase Build Specification

Weekly Monday Meeting — Disposition Decisions per Vacated Unit

Parakeet Communities · Internal · Confidential

VERSION	DATE	STATUS	WORKFLOW ID	SUPERSEDES	COMMUNITIES
v1.0	08/19/26	DRAFT FOR REVIEW	WF003	None — first issue	68 Active

v1.0 — First Issue: Formalizes the weekly Monday Asset Management meeting in Quickbase. Tracks disposition decisions (Rehab / Demo / Turn for Sale / Hold / No Action) per unit per meeting. Auto-triggers WF002 Rehab when disposition = Rehab; sets lot and asset statuses for Demo and Turn for Sale dispositions. Upstream trigger for WF002 and future Demo / Listing workflows. No FastField forms — QB-only workflow.

SECTION 01 Document Purpose & Scope

This document specifies the Quickbase build for **WF003 – Asset Disposition Review**. WF003 formalizes the weekly Monday morning Asset Management meeting in Quickbase – capturing disposition decisions per vacated unit and automatically triggering the appropriate downstream workflow based on that decision.

> **Design Intent:** Today the Monday meeting runs entirely outside Quickbase. Dispositions (Rehab / Demo / Turn for Sale) are decided verbally and entered manually into downstream systems – or not entered at all. WF003 creates a structured record of every meeting, every unit reviewed, and every decision made. This gives the company a full disposition audit trail and removes manual handoffs as the trigger for WF002 and future Demo/Listing workflows.

ITEM	DETAIL
Workflow Name	Asset Disposition Review
Workflow ID	WF003
Primary Purpose	Record Monday Asset Disposition meeting outcomes in QB per unit; auto-trigger downstream workflows based on disposition assigned.
Meeting Cadence	Weekly – every Monday AM
Meeting Facilitator	Asset Management team
Participants	Asset Management, Ops, Construction, Sales
Disposition Options	Rehab / Demo / Turn for Sale / Hold / No Action
Downstream Workflows	WF002 Rehab (Disposition = Rehab) · Demo workflow (Disposition = Demo – future WF) · Listings (Disposition = Turn for Sale – future WF)
FastField Forms	None – QB-only workflow (office / meeting data entry)

QB Tables	2 — Disposition Meetings (DM) + Disposition Items (DI)
In Scope	Weekly Monday meeting record creation; per-unit Disposition Item records; disposition assignment (all 5 values); automations triggering WF002 on Rehab disposition; lot and asset status updates on Demo and Turn for Sale; meeting-level rollups and reporting; audit trail of all disposition decisions
Out of Scope	Demo execution workflow (future WF); listing execution workflow (future WF); Rent Manager record creation or modification; financial tracking (handled in WF002); FastField field forms; units not yet reviewed / not yet vacated
Dependent Workflows	WF002 Rehab — triggered automatically when Disposition = Rehab. Future Demo WF — triggered when Disposition = Demo. Future Listing WF — triggered when Disposition = Turn for Sale.

SECTION 02 Workflow Overview

WF003 operates at two levels: a **Meeting record** (one per Monday meeting) and **Item records** (one per unit reviewed at that meeting). The meeting recorder creates items in QB before or during the meeting. After each disposition is assigned, QB automations fire immediately — no manual handoff required.

1	2	3	4	5	6
Meeting Created	Items Added	Pending Review	Reviewed	Actioned	Closed
Asset Mgmt	*Recorder*	*Meeting*	*Asset Mgmt*	*Auto*	*Auto / Ops*

Stages 3–6 apply per Disposition Item. Meeting record status = Open until all items are Actioned or Closed, then auto-sets to Closed.

QB TABLES	ITEM STAGES	AUTOMATIONS
2	4	5
GATE RULES	**FASTFIELD FORMS**	**DISPOSITION VALUES**
3	None	5

SECTION 03 Disposition Outcomes

Five possible outcomes — each drives a different QB action

All five dispositions are available on every Disposition Item. The assigned value determines what automation fires and what downstream workflow (if any) is triggered.

REHAB — Unit requires rehabilitation before re-listing

- Automation A-DR-01 fires immediately on save.
- Creates a new WF002 Rehab Record — Community, Lot, and Asset passed automatically.
- Sets Lot Status → **Lot-In Rehab** on the linked Lot record.
- Sets Asset Status → **Rehab in Process** on the linked Asset record.
- Downstream Record ID field on the Disposition Item is auto-populated with the new Rehab Record ID (e.g., RH-2026-004).
- Item Status auto-advances to **Actioned**.

DEMO — Unit flagged for demolition

- Automation A-DR-02 fires immediately on save.
- Sets Lot Status → **Lot-Demo** on the linked Lot record.
- Sets Asset Status → **To Be Demoed** on the linked Asset record.
- Sends notification to Ops team: unit flagged for Demo, meeting date, community, lot, and asset details included.
- Item Status auto-advances to **Actioned**.
- *Note: Full Demo execution workflow (WF-Demo) is a future workflow. WF003 handles the flag and status update only.*

TURN FOR SALE – Unit to be listed for sale

- Automation A-DR-03 fires immediately on save.
- Sets Asset Status → **For Sale** on the linked Asset record.
- Sends notification to Listing team: unit approved for sale, meeting date, community, lot, asset, and any disposition notes included.
- Item Status auto-advances to **Actioned**.
- *Note: Full Listing workflow (WF006) is a separate workflow. WF003 triggers the initial notification and status update only.*

HOLD – Decision deferred; unit held pending further information

- Automation A-DR-05 fires: Item Status advances to **Closed**. No status changes to Lot or Asset.
- Disposition Notes field should capture reason for hold and expected review date.
- Unit should be re-added to the next meeting agenda (manual – recorder adds a new Disposition Item).

NO ACTION – Reviewed; no disposition assigned at this time

- Automation A-DR-05 fires: Item Status advances to **Closed**. No status changes to Lot or Asset.
- Record preserved for audit trail – unit was reviewed but no action was warranted.

SECTION 04 Item Stages (per Disposition Item)

Each Disposition Item moves through 4 stages. Meeting-level status is a separate field on the Disposition Meeting record and tracks aggregate progress.

#	STAGE	OWNER	DESCRIPTION
1	Pending Review	Recorder	Disposition Item created in QB. Community, Lot, and Asset linked. Current Lot Status and Asset Status captured as a snapshot. No disposition assigned yet. Gate: Community, Lot, and Asset must all be set before Item Status can advance.
2	Reviewed	Asset Mgmt	Meeting attendees review the unit. Disposition assigned (Rehab / Demo / Turn for Sale / Hold / No Action). Disposition Notes entered if applicable. Gate: Disposition field must be set (not blank) before advancing from Pending Review. Reviewed Date auto-stamped.
3	Actioned	Auto (QB)	Set automatically by automation upon Disposition assignment for Rehab, Demo, and Turn for Sale. Downstream record created or notification sent. Actioned Date auto-stamped. Downstream Record ID populated where applicable.
4	Closed	Auto / Ops	Set automatically for Hold and No Action (no downstream workflow triggered). For Rehab / Demo / Turn for Sale: auto-closes when downstream record confirmed. Meeting Status on parent record auto-sets to Closed when all items reach Actioned or Closed.

SECTION 05 Quickbase Tables

5A – Disposition Meetings (DM)

One record per Monday meeting. Parent table. Record ID format: DM-YYYY-###

FIELD	TYPE	NOTES
Meeting ID	*Text (auto)*	DM-YYYY-### format. Auto-generated on record creation.

Meeting Date	Date	Required. Date of the Monday meeting. Format: mm/dd/yy. Should always be a Monday – validation rule recommended (open item).
Meeting Status	Dropdown	Values: Open / Closed. Defaults to Open on creation. Auto-set to Closed by A-DR-04 when all linked Disposition Items = Actioned or Closed.
Facilitator	User	Required. QB user running the meeting – typically Asset Management lead.
Participants	Text (multi-line)	Optional. Names or roles of attendees beyond the facilitator (Ops, Construction, Sales reps).
Meeting Notes	Text (multi-line)	Optional. General meeting notes – not unit-specific (unit notes go on individual Disposition Items).
Total Units Reviewed	*Count (rollup)*	Count of all linked Disposition Items. Auto-calculated.
Rehab Count	*Count (rollup)*	Count of linked Disposition Items where Disposition = Rehab. Auto-calculated.
Demo Count	*Count (rollup)*	Count of linked Disposition Items where Disposition = Demo. Auto-calculated.
Turn for Sale Count	*Count (rollup)*	Count of linked Disposition Items where Disposition = Turn for Sale. Auto-calculated.
Hold Count	*Count (rollup)*	Count of linked Disposition Items where Disposition = Hold. Auto-calculated.
Created By	*User (auto)*	QB user who created the meeting record. Auto-stamped.
Created Date	*Date/Time (auto)*	Auto-stamped on record creation.

5B – Disposition Items (DI)

One record per unit reviewed at a meeting. Child of Disposition Meetings. Record ID format: DI-YYYY-###

FIELD	TYPE	NOTES
Item ID	*Text (auto)*	DI-YYYY-### format. Auto-generated on record creation.
Meeting	Relationship → Disposition Meetings	Required. Links this item to the parent Monday meeting record (DM-YYYY-###).
Community	Relationship → Communities	Required. Top of cascade. Filtered to active communities.
Lot	Relationship → Lots	Required. Filtered dynamically to lots belonging to the selected Community.
Asset	Relationship → Assets	Required. Filtered dynamically to assets on the selected Lot.
Lot Status at Review	*Text (formula)*	Snapshot of the Lot's current Lot Status at time of review – pulled from the linked Lot record. Read-only. Preserved even if Lot Status changes after meeting.
Asset Status at Review	*Text (formula)*	Snapshot of the Asset's current Asset Status at time of review – pulled from the linked Asset record. Read-only. Preserved even if Asset Status changes after meeting.
Disposition	Dropdown	Values: (blank – Pending) / Rehab / Demo / Turn for Sale / Hold / No Action. Defaults to blank. Setting this field to a non-blank value triggers the appropriate automation. Required before advancing Item Status.
Disposition Notes	Text (multi-line)	Optional. Reason for disposition, specific scope notes, or hold details. Required when Disposition = Hold (open item – O-WF003-001).

Assigned To	User	Optional. QB user responsible for following up on this item (e.g., the Ops rep who will initiate WF002).
Item Status	Dropdown	Values: Pending Review / Reviewed / Actioned / Closed. Defaults to Pending Review on creation. Drives automations and gate rules.
Downstream Record ID	*Text (auto)*	Auto-populated by automation with the ID of the downstream record created – e.g., RH-2026-004 for a Rehab disposition. Empty for Hold and No Action.
Reviewed Date	*Date (auto)*	Auto-stamped when Item Status advances to Reviewed.
Actioned Date	*Date (auto)*	Auto-stamped when Item Status advances to Actioned.
Created By	*User (auto)*	QB user who created this Disposition Item. Auto-stamped.
Created Date	*Date/Time (auto)*	Auto-stamped on record creation.

Cascade Logic (Community → Lot → Asset): All three relationship fields use the same dynamic cascade architecture established in WF001 and WF002 (D-011). Community is selected first; Lot dropdown filters to that community only; Asset dropdown filters to that lot only. Context filter for WF003: no status restriction on Lot or Asset – any recently vacated unit may be under review regardless of current status. The meeting recorder selects the unit and the status snapshot fields capture the current state automatically.

SECTION 06 Automations

5 automations – A-DR-01 through A-DR-05

All automations trigger immediately on save (not on a schedule). Timing column below confirms trigger type.

ID	TRIGGER	TIMING	ACTION
A-DR-01	Disposition Item saved with Disposition = Rehab	Immediate	**Create WF002 Rehab Record** – passes Community, Lot, Asset, Meeting Date (from parent DM record), and Disposition Notes to the new Rehab Record. New Rehab Record ID auto-generated (RH-YYYY-###). **Update Lot record:** Lot Status → Lot-In Rehab. **Update Asset record:** Asset Status → Rehab in Process. **Update Disposition Item:** Downstream Record ID = new RH-####; Item Status → Actioned; Actioned Date → today.
A-DR-02	Disposition Item saved with Disposition = Demo	Immediate	**Update Lot record:** Lot Status → Lot-Demo. **Update Asset record:** Asset Status → To Be Demoed. **Send notification to Ops team:** "[Asset ID] at [Community] has been flagged for Demo at the [Meeting Date] Asset Disposition meeting. Lot: [Lot]. Notes: [Disposition Notes]." **Update Disposition Item:** Item Status → Actioned; Actioned Date → today.
A-DR-03	Disposition Item saved with Disposition = Turn for Sale	Immediate	**Update Asset record:** Asset Status → For Sale. **Send notification to Listing team:** "[Asset ID] at [Community] has been approved for sale at the [Meeting Date] Asset Disposition meeting. Lot: [Lot]. Notes: [Disposition Notes]. Please initiate the listing process." **Update Disposition Item:** Item Status → Actioned; Actioned Date → today.
A-DR-04	All Disposition Items for a Disposition Meeting = Actioned or Closed	Immediate	**Update Disposition Meeting record:** Meeting Status → Closed.

A-DR-05	Disposition Item saved with Disposition = Hold or No Action	Immediate	**Update Disposition Item:** Item Status → Closed. No status changes to Lot or Asset record. Record preserved for audit trail.

A-DR-01 Integration with WF002: The Rehab Record created by A-DR-01 is a fully formed WF002 record at Stage 1 (Rehab Identified). The meeting recorder does not need to open WF002 separately – the record is created automatically and the Rehab team is notified per WF002 automation A-RH-02 (existing). The WF003 Disposition Item and the WF002 Rehab Record are linked via the Downstream Record ID field for full traceability.

SECTION 07 Gate Rules

3 hard stops – no exceptions

Gate rules are enforced at the QB form level and automation level. They are hard stops – the record cannot be saved in a state that violates a gate rule.

GATE ID	RULE
G-DR-01	**Disposition required before Reviewed status.** Item Status cannot be set to Reviewed (or beyond) unless Disposition is set to a non-blank value (Rehab / Demo / Turn for Sale / Hold / No Action). A unit cannot be marked as reviewed without a disposition decision on record.
G-DR-02	**All items must be Actioned or Closed before Meeting can close.** Disposition Meeting Status cannot be manually set to Closed if any linked Disposition Item = Pending Review or Reviewed. Meeting closure is auto-handled by A-DR-04 – manual close override is blocked. This ensures no unit is forgotten at an open meeting.
G-DR-03	**No duplicate active Disposition Items for the same Lot in the same meeting.** A Disposition Item cannot be created for a Lot that already has a non-Closed Disposition Item linked to the same Disposition Meeting. If a unit needs to be re-reviewed, the existing item must be closed first or a new meeting must be created.

SECTION 08 Relationships & Downstream Workflows

WORKFLOW	RELATIONSHIP TO WF003
WF002 – Rehab	Primary downstream. When Disposition = Rehab, A-DR-01 auto-creates a WF002 Rehab Record. Community, Lot, Asset, and Disposition Notes passed automatically. The WF003 Disposition Item links to the created Rehab Record via Downstream Record ID. WF003 provides the official trigger and audit trail for every WF002 Rehab Record created via meeting disposition.
Demo Workflow (future)	Not yet specced. When Disposition = Demo, WF003 sets Lot Status → Lot-Demo and Asset Status → To Be Demoed and notifies Ops. The full Demo execution workflow will be specced separately. WF003 creates the disposition record and status changes; the Demo WF will handle execution tracking.
WF006 – Listings (future)	Not yet specced. When Disposition = Turn for Sale, WF003 sets Asset Status → For Sale and notifies Listing team. The full Listing workflow will be specced separately. WF003 creates the disposition record and initial status; WF006 handles the listing execution.
Move Out Workflow (future)	A completed Move Out record may pre-populate the Lot and Asset fields on a new Disposition Item – the unit appears on the next meeting's agenda automatically. Move Out WF is not yet specced; this integration point is noted for future design.
Communities Table	WF003 Disposition Items use the same Communities reference table as WF001 and WF002. No new community data required.
Lot Status Table (LS)	WF003 automations write to Lot Status on the linked Lot record using the same LS reference table defined in WF002. No additional Lot Status values required for WF003.
Asset Status Table (AS)	WF003 automations write to Asset Status on the linked Asset record using the same AS reference table defined in WF002. Values used: Rehab in Process (Rehab), To Be Demoed (Demo), For Sale (Turn for Sale).

SECTION 09 Reports & Views

Standard QB reports to build alongside WF003. All reports are QB-native — no external BI tool required at this stage.

REPORT NAME	DESCRIPTION
This Week's Meeting	Shows the current week's Disposition Meeting and all linked Disposition Items. Default view for the Monday meeting recorder. Columns: Item ID, Community, Lot, Asset, Status at Review, Disposition, Disposition Notes, Item Status, Downstream Record ID.
All Open Meetings	Lists all Disposition Meetings where Meeting Status = Open. Used to confirm no meeting has outstanding unactioned items. Columns: Meeting ID, Meeting Date, Facilitator, Total Units Reviewed, Rehab Count, Demo Count, Turn for Sale Count, Hold Count.
Disposition History by Community	All Disposition Items grouped by Community. Filterable by date range and disposition type. Used for portfolio-level reporting and asset management reviews.
Rehab Pipeline Source	All Disposition Items where Disposition = Rehab. Links through to associated WF002 Rehab Records. Shows disposition date, community, lot, asset, and current WF002 stage.
Pending Items (Unactioned)	All Disposition Items where Item Status = Pending Review or Reviewed. Used to identify any items that have stalled without an outcome. Expected to be empty at end of each meeting week.

SECTION 10 Open Items

ITEM ID	DESCRIPTION	OWNER	STATUS
O-WF003-001	**Hold disposition — notes required?** Should Disposition Notes be a required field when Disposition = Hold? Without a note, there is no record of why the unit was held or when it should be re-reviewed. Recommended: yes, required on Hold. Confirmation needed.	Austin	OPEN
O-WF003-002	**Meeting date validation — enforce Monday only?** Should QB validate that the Meeting Date field is always a Monday? Enforcing this prevents data entry errors but adds a validation rule to configure. If meetings sometimes occur on other days (e.g., holiday weeks), validation should be a warning rather than a block.	Austin	OPEN
O-WF003-003	**Agenda pre-population from Move Out?** Should a completed Move Out record automatically add the vacated unit to the next Monday meeting's Disposition Item list? This would require the Move Out workflow to be specced first. Recommended: yes — reduces manual data entry by the meeting recorder. Deferred until Move Out WF is designed.	Design dependency	PENDING MOVE OUT WF
O-WF003-004	**Notification recipients for Demo and Turn for Sale.** A-DR-02 (Demo) notifies "Ops team" and A-DR-03 (Turn for Sale) notifies "Listing team." Specific QB user(s) or email distribution list for each notification must be confirmed before automations can be configured.	Austin	OPEN
O-WF003-005	**Units already in WF002 — block duplicate?** G-DR-03 blocks duplicate items within the same meeting. Should QB also block (or warn) when a recorder tries to add a unit that already has an active WF002 Rehab Record — meaning a previous meeting already sent it to rehab? Recommended: warning (not hard block) so recorder can note the status and skip.	Austin	OPEN

SECTION 11 Version History

VERSION	DATE	AUTHOR	CHANGES
v1.0	08/19/26	Abacus AI Agent	First issue. Full spec for WF003 Asset Disposition Review: 2 QB tables (Disposition Meetings, Disposition Items), 4 item stages, 5 automations (A-DR-01 through A-DR-05), 3 gate rules (G-DR-01 through G-DR-03), 5 reports, 5 open items. WF002 Rehab integration via A-DR-01 fully documented. Disposition outcomes (Rehab / Demo / Turn for Sale / Hold / No Action) fully specified.
