WF006 — Listings

REPLACES JOTFORMS
#2 Home Listing Request Form

OPEN ITEMS
5 (O-WF006-001 through -005)

DECISIONS LOGGED
D-046 through D-050

SECTION 01 Workflow Overview

WF006 manages the full listing lifecycle for Parakeet Communities assets — from the Community Manager's listing request through active marketing, price adjustments, and listing close. It is the primary pathway for getting a vacant or newly rehabbed home onto the market.

> **WF006 is independent.** Any Community Manager can submit a listing request for any eligible asset at any time — it does not require WF002 (Rehab) completion as a prerequisite, though WF002's handoff notification to the listing team (Leslie and Tanya) commonly precedes it. When an offer is received, WF007 (Offer to Purchase/Rent) is initiated as a separate workflow.

Summary Statistics

QB Tables	FastField Forms	Automations
2 (Listing Records + Price History)	1 (Listing Request Form)	6 (A-LS-01 through A-LS-06)
Gate Rules	**Listing Team**	**RM Sync**
4 (G-LS-01 through G-LS-04)	Leslie + Tanya	Daily batch CSV — 6 PM ET

System Roles

SYSTEM	ROLE IN WF006	NOTES
Quickbase (QB)	Workflow engine	Listing Records, Price History, automations, gate rules, dashboards. All status tracking lives here.
FastField	Field form capture	Community Manager completes Listing Request Form in FastField. Submission triggers QB record creation.
Rent Manager (RM)	System of record	RM user-defined fields (Listing Status, Listed By, Listing Date, Listing Price) are updated via daily 6 PM ET batch CSV export from QB. RM is the financial and legal source of truth.
SharePoint	Document storage	Marketing materials, photos, listing packages stored in SharePoint. QB stores the link. SharePoint path TBD (O-WF006-004).

Listing Team

PERSON	ROLE	RESPONSIBILITIES IN WF006

Leslie	Listing Team Lead	Reviews and approves/rejects listing requests. Sets Listing Price, Listing Date, Listed By. Manages active listings. Full email to be confirmed at build phase.
Tanya	Listing Team Member	Co-notified on all listing requests. Supports listing management. Full email to be confirmed at build phase.

SECTION 02

Trigger

Single trigger: Community Manager submits the FastField Listing Request Form. Submission creates a QB Listing Record and notifies Leslie and Tanya.

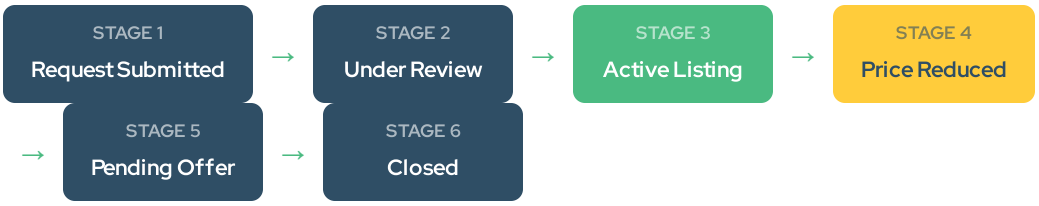

TRIGGER TYPE	EVENT	DETAIL
FastField Form Submission	CM submits Listing Request Form	Community Manager completes and submits the FastField Listing Request Form for an eligible asset. Replaces JotForm #2 (Home Listing Request Form). QB automation A-LS-01 fires on submission.

What Commonly Precedes This Trigger

UPSTREAM EVENT	RELATIONSHIP TO WF006
WF002 Rehab Complete	When Rehab Status = Complete, A-RH-11 notifies Leslie and Tanya that the home is ready to list. The CM then submits the FastField Listing Request Form to formally initiate WF006. This is the most common path.
WF003 Disposition = Turn for Sale	When the Asset Disposition Review assigns Turn for Sale, A-DR-03 updates the asset status. CM may then submit a listing request independently.
Direct / Acquisition Listing	New acquisitions, community-owned inventory, or management decisions may prompt a listing request without a preceding WF002 or WF003 event. WF006 is always available as a standalone trigger.

SECTION 03

Workflow Stages

Stage 4 (Price Reduced) is a modifier stage, not a linear block. An active listing moves to Price Reduced when a price change is recorded and returns to Active after the change is applied. It does not interrupt the progression to Pending Offer or Closed.

#	STAGE	WHO ACTS	WHAT HAPPENS	EXIT CONDITION
1	**Request Submitted**	Community Manager (via FastField)	CM submits Listing Request Form. QB Listing Record created (LST-YYYY-###). Leslie and Tanya notified via A-LS-01.	Leslie or Tanya reviews the request → advances to Stage 2
2	**Under Review**	Leslie / Tanya (in QB)	Listing team reviews the request, confirms asset eligibility, sets Listing Price and Listing Type. May reject and return to CM with notes.	Approval → Stage 3 (Active). Rejection → CM notified, record status = Rejected.
3	**Active Listing**	Leslie / Tanya	Listing Date stamped. Listed By set. Listing distributed to platforms (O-WF006-001 – TBD). RM UDFs updated via daily batch. SharePoint marketing folder linked.	Price change → Stage 4. Offer received → Stage 5. Withdrawn/expired → Stage 6.

4	**Price Reduced**	Leslie / Tanya	New price recorded. Price History entry created (PH-YYYY-###). RM batch sync queued. Status returns to Active after price is updated.	Price update confirmed → returns to Stage 3 (Active)
5	**Pending Offer**	WF007 (Offer to Purchase/Rent)	Offer received. WF007 initiated as a separate workflow. Listing record locked — no price changes, no withdrawals while offer is pending.	WF007 offer accepted → Stage 6 (Closed — Sold). WF007 offer rejected → returns to Stage 3 (Active).
6	**Closed**	Leslie / Tanya (or automation)	Listing closed. Close reason recorded: Sold / Withdrawn / Expired. Asset Status updated in QB. RM final sync triggered. CM notified.	Terminal stage — record is locked after close.

Rejection Path

> **Rejected listings** are closed records — they do not proceed to Stage 3. If the CM needs to re-submit after a rejection, they submit a new Listing Request Form, which creates a new Listing Record (new LST-YYYY-### ID). The rejected record is retained for audit purposes with Status = Rejected and the rejection reason noted.

SECTION 04 Quickbase Architecture

4.1 QB Tables

#	TABLE NAME	RECORD ID FORMAT	PURPOSE	KEY RELATIONSHIPS

1	**Listing Records**	LST-YYYY-###	One record per listing. Captures all listing data from request through close. Primary WF006 table.	→ Communities, Lots, Assets/Homes, Price History
2	**Price History**	PH-YYYY-###	One record per price change event. Tracks original price, new price, change date, and who changed it. Enables audit trail for all price movements.	→ Listing Records (parent), Communities

> **Shared reference tables** – Communities, Lots, and Assets/Homes are pre-existing reference tables shared across all workflows (WF001–WF006). WF006 reads from them via QB relationship fields; it does not own them.

4.2 Listing Records – Field Specification

Identification & Cascading Location

FIELD NAME	TYPE	REQUIRED	NOTES
Listing ID	Auto-generated	Required	Format: LST-YYYY-### (e.g., LST-2026-001). System-generated on record creation.
Community	QB Relationship	Required	Cascading dropdown → Communities table. Populated from FastField form submission. Filters available Lots to selected community.
Lot	QB Relationship	Required	Cascading dropdown → Lots table. Filtered by Community. Filters available Assets to selected Lot.
Asset / Home	QB Relationship	Required	Cascading dropdown → Assets/Homes table. Filtered by Lot. The specific asset being listed.

Listing Status	Dropdown	Required	Values: Request Submitted / Under Review / Active / Price Reduced / Pending Offer / Closed – Sold / Closed – Withdrawn / Closed – Expired / Rejected. Set by automation; listing team does not manually change status except to close or reject. Synced to RM UDF daily.

Request Fields (populated by FastField form submission)

FIELD NAME	TYPE	REQUIRED	NOTES
Request Date	Date	Required	Date CM submitted the FastField form. Auto-stamped on record creation.
Requesting CM	Text	Required	Community Manager who submitted the request. Pulled from FastField form submission metadata.
Listing Type	Dropdown	Required	Values: For Sale / Rent to Own / Lease Option. CM selects on form.
Proposed Listing Price	Currency	Required	CM's proposed listing price. Format: $XX,XXX.XX. Listing team may modify during review before setting the Official Listing Price.
Asset Condition Notes	Text (multiline)	Optional	CM's observations on current asset condition. Informational for the listing team.
Marketing Notes	Text (multiline)	Optional	Any special features, recent upgrades, or selling points the CM wants to highlight.

Listing Team Fields (populated by Leslie / Tanya in QB)

FIELD NAME	TYPE	REQUIRED	NOTES
Official Listing Price	Currency	Required	Final approved listing price set by Leslie/Tanya. Format: $XX,XXX.XX. G-LS-01: hard block – required before listing can go Active. Synced to RM UDF "Listing Price."

Listing Date	Date	Required	Date listing goes live. Format: mm/dd/yy. G-LS-02: hard block — required before listing can go Active. Synced to RM UDF "Listing Date."
Listed By	Dropdown	Required	Values: Leslie / Tanya. Who is managing this listing. Synced to RM UDF "Listed By."
Approved By	Dropdown	Required	Values: Leslie / Tanya. Who approved the listing request.
Approval Date	Date	Required	Date listing team approved the request. Auto-stamped by A-LS-02.
Listing Platform(s)	Checkbox (multi-select)	Optional	Where this listing is posted. Values TBD (O-WF006-001 — need Leslie). e.g., MHVillage / Zillow / Internal Site / Other.
Platform Listing URL(s)	Text	Optional	Direct URL(s) to the live listing(s) on each platform. Leslie/Tanya enter after going live.
Rejection Reason	Text (multiline)	Conditional	Required if listing is rejected. Minimum 10 characters. CM notified via A-LS-03.

SharePoint & RM Sync Fields

FIELD NAME	TYPE	REQUIRED	NOTES
SharePoint Marketing Folder Link	URL	Optional	Link to the SharePoint folder for this listing's marketing materials (photos, PDFs, etc.). Folder path TBD (O-WF006-004).
RM Last Synced	Date/Time	Auto	Timestamp of last successful RM batch export update. Auto-stamped by A-LS-05. Read-only.
RM Sync Status	Dropdown	Auto	Values: Pending / Synced / Error. Updated by A-LS-05. Read-only. Error triggers alert to listing team.

Close Fields

FIELD NAME	TYPE	REQUIRED	NOTES

Close Date	Date	Conditional	Required when Listing Status = any Closed value. Format: mm/dd/yy. Auto-stamped on close.
Close Reason	Dropdown	Conditional	Required when closing. Values: Sold / Withdrawn / Expired. "Sold" is auto-set when WF007 offer is accepted.
Days on Market	Calculated (numeric)	Auto	Calculated: Close Date − Listing Date. Auto-populated on close. Read-only.
Close Notes	Text (multiline)	Optional	Any relevant notes at close (buyer details if sold, reason for withdrawal, etc.).

4.3 Price History — Field Specification

FIELD NAME	TYPE	REQUIRED	NOTES
Price History ID	Auto-generated	Required	Format: PH-YYYY-###
Parent Listing Record	QB Relationship	Required	Links to LST-YYYY-### parent record.
Previous Price	Currency	Required	Price before the change. Auto-populated from parent Listing Record on creation.
New Price	Currency	Required	Price after the change.
Price Change Date	Date	Required	Date the price change was recorded. Auto-stamped.
Changed By	Dropdown	Required	Values: Leslie / Tanya.
Reason for Change	Text	Optional	Brief note on why the price was changed.
Price Change Amount	Calculated (currency)	Auto	Calculated: New Price − Previous Price. Negative value = reduction.
Price Change %	Calculated (percentage)	Auto	Calculated: (New Price − Previous Price) / Previous Price × 100. Displayed to 1 decimal.

SECTION 05

FastField Form

Form 1 — Listing Request Form

FastField Form Name: PARAKEET — WF006 — Listing Request Form

Completed By: Community Manager

Replaces: JotForm #2 — Home Listing Request Form

Submission Trigger: Fires A-LS-01 — creates QB Listing Record + notifies Leslie and Tanya

> **CM completes this form, not the listing team.** The CM provides asset location, proposed price, condition notes, and marketing highlights. Leslie and Tanya review, modify if needed, and approve or reject inside QB — they do not have a separate FastField form.

#	FIELD LABEL	FIELD TYPE	REQUIRED	NOTES / LOGIC
SECTION A — PROPERTY LOCATION				
1	Community	Dropdown	Required	68-community list from QB. Cascades to Lot field.
2	Lot Number / Site	Dropdown	Required	Filtered by Community. Cascades to Asset field.
3	Asset / Home	Dropdown	Required	Filtered by Lot. Links to QB Asset record.
SECTION B — LISTING DETAILS				
4	Listing Type	Dropdown	Required	Values: For Sale / Rent to Own / Lease Option.

5	Proposed Listing Price	Currency	Required	CM's suggested listing price. Format: $XX,XXX.XX. Listing team confirms or modifies during review.
6	Desired Listing Date	Date	Optional	CM's preferred go-live date. Informational for Leslie/Tanya — not a binding commitment.
SECTION C — ASSET CONDITION				
7	Asset Condition	Dropdown	Required	Values: Excellent / Good / Fair / Poor. CM's assessment of current asset condition.
8	Rehab Completed?	Yes / No	Required	Was a WF002 Rehab completed on this asset prior to this listing request?
9	Condition Notes	Text (multiline)	Optional	Additional condition details, known issues, recent repairs not captured in WF002.
SECTION D — MARKETING HIGHLIGHTS				
10	Key Selling Points	Text (multiline)	Optional	Features, upgrades, community amenities worth highlighting in the listing. Used by Leslie/Tanya when drafting listing copy.
11	Photos Available?	Yes / No	Required	Are photos ready to upload for the listing?
12	Photo Upload	File Attachment (multi)	Conditional	Required if Photos Available = Yes. Up to 10 photos. JPG/PNG. FastField delivers photo URLs to QB.
SECTION E — SUBMISSION				
13	Requesting CM Name	Text	Required	Full name of the Community Manager submitting this request.
14	Submission Date	Date	Required	Auto-populated to today's date. CM can confirm or correct.
15	Additional Notes	Text (multiline)	Optional	Any other information the CM wants the listing team to know.

SECTION 06

Automations

> **Community Manager does not manually set any QB status fields.** All Listing Status changes are driven by Leslie/Tanya actions in QB or by automation. The CM's role in QB is read-only after the FastField form is submitted.

ID	NAME	TRIGGER	ACTION
A-LS-01	Listing Request Received	FastField Listing Request Form submitted	1. Create QB Listing Record (LST-YYYY-###), Status = Request Submitted. 2. Populate all fields from FastField submission (Community, Lot, Asset, Listing Type, Proposed Price, Condition, CM Name, Submission Date, photos). 3. Send notification to Leslie and Tanya: *"New Listing Request submitted by [CM Name] for [Community] – [Lot/Asset]. Proposed price: $[X]. Review in QB: [link]."*
A-LS-02	Listing Approved	Leslie/Tanya sets Listing Status = Active in QB	1. Stamp Approval Date = today. 2. Stamp Listing Date = today (if not already set by team). 3. Set RM Sync Status = Pending. 4. Send notification to requesting CM: *"Your listing request for [Community – Lot/Asset] has been approved and is now active. Listing Price: $[X]. Listed By: [Leslie/Tanya]."*
A-LS-03	Listing Rejected	Leslie/Tanya sets Listing Status = Rejected in QB	1. Require Rejection Reason (hard block via G-LS-03 if empty). 2. Send notification to requesting CM: *"Your listing request for [Community – Lot/Asset] was not approved. Reason: [Rejection Reason]. Contact Leslie or Tanya with questions."* 3. Lock record – no further edits by CM. Record retained for audit.

A-LS-04	Price Change Recorded	Official Listing Price updated on an Active or Price Reduced listing record	1. Create Price History record (PH-YYYY-###): Previous Price = old value, New Price = new value, Price Change Date = today, Changed By = Leslie/Tanya. 2. Set Listing Status = Price Reduced. 3. Set RM Sync Status = Pending. 4. Send notification to requesting CM: *"Listing price for [Community – Lot/Asset] has been updated from $[old] to $[new]."*
A-LS-05	Daily RM Batch Export	Daily – 6 PM ET	Export CSV of all Listing Records where RM Sync Status = Pending or last sync > 24 hours ago. CSV columns: Listing ID, Community Short Name, Lot Number, Asset ID, Listing Status, Listed By, Listing Date, Official Listing Price, Last Update Date. Delivered to Justin / RM admin team for import into RM user-defined fields. On successful export: Set RM Sync Status = Synced, RM Last Synced = current timestamp. Column mapping to exact RM UDF field names to be confirmed at build phase (O-WF006-002).
A-LS-06	Listing Closed	Leslie/Tanya sets Listing Status = any Closed value	1. Stamp Close Date = today. 2. Calculate Days on Market = Close Date - Listing Date. 3. If Close Reason = Sold: update Asset Status in QB to reflect sold (RM-exact value to confirm). 4. Set RM Sync Status = Pending (final sync). 5. Lock Listing Record – no further edits. 6. Send notification to requesting CM: *"Listing for [Community – Lot/Asset] has been closed. Close Reason: [Sold/Withdrawn/Expired]. Days on Market: [X]."*

SECTION 07

Gate Rules

All gate rules are hard blocks. QB will not allow the record to advance until the condition is met. No exceptions, no overrides.

ID	GATE NAME	CONDITION	BLOCK MESSAGE	RESOLVES WHEN
G-LS-01	Official Price Required Before Active	Official Listing Price is blank when attempting to set Status = Active	*"Official Listing Price is required before a listing can go Active. Enter a confirmed listing price to proceed."*	Official Listing Price is entered.
G-LS-02	Listing Date Required Before Active	Listing Date is blank when attempting to set Status = Active	*"Listing Date is required before a listing can go Active. Enter the go-live date to proceed."*	Listing Date is entered.
G-LS-03	Rejection Reason Required	Rejection Reason is blank or fewer than 10 characters when attempting to set Status = Rejected	*"A rejection reason is required when rejecting a listing request. Enter at least 10 characters to proceed."*	Rejection Reason field contains ≥ 10 characters.
G-LS-04	No Changes While Offer Pending	Listing Status = Pending Offer and user attempts to change Official Listing Price or set Status = any Closed value (except Closed — Sold via WF007)	*"This listing has a pending offer and cannot be modified or closed until the offer is resolved in WF007."*	WF007 offer is accepted (→ auto-close Sold) or rejected (→ returns to Active).

SECTION 08

Rent Manager Alignment

Rent Manager is the system of record for all listing financial and status data. QB captures and manages the listing workflow; RM UDFs are updated via the daily 6 PM ET batch CSV export (A-LS-05). RM does not drive QB — data flows QB → RM only.

> **RM user-defined fields** — Austin confirmed that RM has user-defined fields for Listing Status, Listed By, Listing Date, Listing Price, and related data. The exact RM UDF field names and allowed values must be confirmed by Justin / RM admin before the build phase to ensure the batch CSV export maps correctly. See O-WF006-002 and O-WF006-003.

QB → RM Field Mapping (pending confirmation)

QB FIELD (LISTING RECORD)	RM UDF (NAME TBD)	NOTES
Listing Status	*TBD — O-WF006-002*	Exact RM UDF name and allowed values to confirm. QB values: Active / Price Reduced / Pending Offer / Closed — Sold, etc.
Listed By	*TBD — O-WF006-002*	QB values: Leslie / Tanya. RM UDF may use different labels — confirm.
Listing Date	*TBD — O-WF006-002*	Date format: mm/dd/yy in QB. RM may require different format — confirm.
Official Listing Price	*TBD — O-WF006-002*	Currency — $XX,XXX.XX. RM UDF type (numeric/text/currency) to confirm.
Listing Type	*TBD — O-WF006-003*	QB values: For Sale / Rent to Own / Lease Option. RM equivalent to confirm.

Close Date	*TBD — O-WF006-002*	Populated when listing closes. RM may have a separate "Date Sold" field.

Batch Export Cadence

Export Time	Daily at 6 PM ET (same export as WF004 Move Out batch — may be consolidated into a single daily Parakeet → RM export file at build phase)
Scope	All Listing Records where RM Sync Status = Pending or last sync > 24 hours ago with any status change
Recipient	Justin / RM admin team — imports into RM user-defined fields
Format	CSV. Column mapping to RM UDF field names confirmed at build phase (O-WF006-002).

SECTION 09 Workflow Connections

CONNECTED WORKFLOW	DIRECTION	CONNECTION TYPE	DETAIL
WF002 – Rehab	WF002 → WF006	Notification handoff	When Rehab Status = Complete, A-RH-11 notifies Leslie and Tanya. The CM then initiates WF006 independently by submitting the FastField Listing Request Form. WF002 does not auto-create a WF006 record.
WF003 – Asset Disposition	WF003 → WF006	Status signal	When Disposition = Turn for Sale, A-DR-03 updates Asset Status to "For Sale." This signals readiness to list. The CM then independently initiates WF006. WF003 does not auto-create a WF006 record.
WF007 – Offer to Purchase/Rent	WF006 → WF007	Offer trigger (separate workflow)	When an offer is received on an Active listing, WF007 is initiated independently. WF006 Listing Status is set to Pending Offer (G-LS-04 blocks changes). If WF007 offer is accepted → WF006 auto-closes as Sold. If rejected → WF006 returns to Active.

SECTION 10 Open Items

The following items require input before WF006 can be finalized and locked. This spec reflects the confirmed architecture; these open items affect specific field values, platform integrations, and RM field mapping.

O-WF006-001 – LISTING PLATFORMS

Where does Parakeet post listings? (e.g., MHVillage, Zillow, internal website, Realtor.com, other?) Austin has indicated this needs to come from Leslie.

Owner: Leslie | **Impact:** Listing Platform(s) field values in QB; integration scope if any platforms have APIs or direct submission tools.

O-WF006-002 — RM UDF FIELD NAMES

What are the exact RM user-defined field names for Listing Status, Listed By, Listing Date, Listing Price, and any additional listing UDFs? Required to build the batch CSV export column mapping for A-LS-05.

Owner: Justin / RM Admin | **Impact:** A-LS-05 batch CSV column headers; RM import template.

O-WF006-003 — RM LISTING STATUS ALLOWED VALUES

What are the allowed values for the RM Listing Status user-defined field? QB Listing Status values (Active / Price Reduced / Pending Offer / Closed — Sold, etc.) need to map 1:1 to RM's existing UDF values, or RM values need to be established.

Owner: Justin / RM Admin | **Impact:** QB Listing Status dropdown values; RM UDF dropdown values; batch export mapping.

O-WF006-004 — SHAREPOINT FOLDER STRUCTURE

What is the SharePoint folder path and naming convention for listing marketing materials? (e.g., /Communities/[Community Name]/Listings/[LST-YYYY-###]/) Required to configure the SharePoint Marketing Folder Link field and any Power Automate auto-folder-creation automation.

Owner: Austin / IT | **Impact:** SharePoint Marketing Folder Link field; optional A-LS-02 enhancement to auto-create SharePoint folder on listing approval.

O-WF006-005 — LISTING SLA / REVIEW TIMELINE

Is there a target SLA for Leslie/Tanya to review and approve/reject a listing request after it is submitted? (e.g., within 2 business days of submission?) If yes, should QB trigger a reminder or escalation if the request sits in "Under Review" past the SLA?

Owner: Austin | **Impact:** May add A-LS-07 (review SLA reminder) to the automation set.

SECTION 11

Version History

VERSION	DATE	STATUS	CHANGES
v1.0	08/19/26	Draft	Initial spec. Decisions D-046–D-050 incorporated. Architecture confirmed: FastField Listing Request Form (CM trigger), 2 QB tables, 6 automations, 4 gate rules, daily RM batch sync. 5 open items remain (O-WF006-001 through -005). Locks after open items resolved.
