BUILD SPECIFICATION

WF004 · MOVE OUT

Move Out

Workflow Design Spec — Move Out Form, Regional Approval, RM Batch Export & Move Out Inspection

FastField · QuickBase · SharePoint · Rent Manager

VERSION	DATE	STATUS	WORKFLOW ID	SUPERSEDES	COMMUNITIES
v1.0	08/19/26	DRAFT FOR REVIEW	WF004	N/A — Initial Release	68 Active

v1.0 — Initial Release: Full WF004 Move Out workflow designed. 3 triggers (voluntary notice, lease non-renewal, eviction outcome) — same path for all. Move Out Form in FastField → Regional approval in FastField → QB batch collector → daily RM CSV export → 48-hr Move Out Inspection in FastField → SharePoint. 5 open items flagged for build phase.

SECTION 01 Overview & Scope

WORKFLOW ID WF004	WORKFLOW NAME Move Out
VERSION v1.0 DRAFT	PRIMARY ACTOR Community Manager
APPROVER Regional Manager	RM PROCESSOR Justin / Rent Manager Team
SYSTEM OF RECORD Rent Manager – all resident & financial data	TRIGGER Voluntary Notice / Lease Non-Renewal / Eviction Outcome
OUTCOME RM updated · Inspection on SharePoint · Unit flagged for WF003	FASTFIELD FORMS 2 – Move Out Form · Move Out Inspection
QB TABLES Move Out Records (+ shared: Communities, Lots)	JOTFORMS REPLACED JotForm #9 (Move Out Inspection) · JotForm #13 (Move In/Out Request)

1.1 Purpose

WF004 formalizes the move-out process across all 68 Parakeet Communities. It captures every move-out event – regardless of reason – through a single FastField form, routes it to the Regional Manager for approval, triggers a daily batch export to Rent Manager, and ensures a Move Out Inspection is completed within 48 hours and stored in SharePoint for review at the weekly Monday Asset Disposition meeting (WF003).

1.2 Scope

In Scope	All 3 move-out triggers; FastField Move Out Form with Regional approval routing; QB Move Out Records table; daily RM batch CSV export; FastField Move Out Inspection with SharePoint storage; 48-hour SLA monitoring; WF003 feed (Asset Status = TBD / Needs Rehab triggers Monday meeting agenda item)

Out of Scope	Security deposit processing (stays in RM); eviction legal proceedings; resident re-application; new lease creation (WF005 Move In); any RM record changes other than the daily batch import
System of Record	Rent Manager. QB is a workflow coordinator and batch collector – it does not own resident or financial records. Community Manager does not change any QB or RM status fields directly.

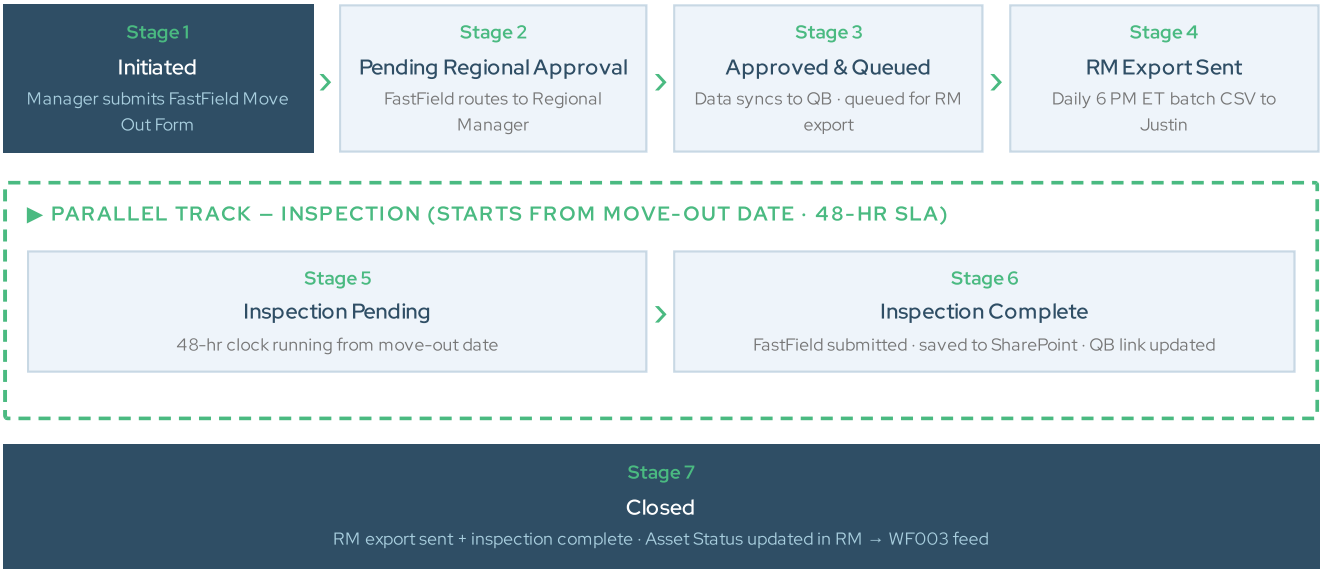

1.3 Triggers (All 3 – Same Path)

Trigger	Description	Who Initiates
Voluntary Notice	Resident submits written notice of intent to vacate. Manager confirms receipt and fills the Move Out Form.	Community Manager
Lease Non-Renewal	Lease expires without renewal – either resident declines or Parakeet declines to renew. Manager fills the Move Out Form when the decision is made.	Community Manager
Eviction Outcome	Legal eviction process concludes with possession returning to Parakeet. Manager fills the Move Out Form once the unit is vacated.	Community Manager

> **Same workflow path for all three triggers.** The reason is captured in the Move Out Form and flows through to the RM batch export for proper RM record categorization – but the QB workflow stages are identical regardless of trigger type.

SECTION 02 Workflow Summary

WF004 runs two parallel tracks after the Move Out Form is submitted: the **Approval & RM Export track** and the **Inspection track**. Both must complete before the record is Closed. The inspection SLA clock starts from the move-out date regardless of the approval state.

If Regional returns the form (not approved), status reverts to Initiated. See O-WF004-005 for return correction flow.

2.1 Stage Summary Table

#	Stage	Owner	Description

1	Initiated	Community Manager	Manager fills and submits **PARAKEET – WF004 – Move Out Form** in FastField. Captures: community, lot, asset, resident details, move-out date, reason, notice date, forwarding address. FastField webhook fires to QB on submission → QB Move Out Record created.
2	Pending Regional Approval	Regional Manager	FastField routes the submitted form to the Regional Manager for review. Regional approves or returns the form directly in FastField. QB record status mirrors approval state via webhook. No QB action required by the Regional Manager.
3	Approved & Queued	QB (automated)	Regional approval webhook updates QB record: `Regional Approval Status = Approved`; `RM Export Status = Queued`. Record joins that day's RM export batch. No manual steps.
4	RM Export Sent	QB (automated) → Justin	Daily at 6:00 PM ET: QB auto-generates CSV of all Queued records → emails to Justin and the RM team. QB sets `RM Export Status = Exported`. Justin's team imports CSV into Rent Manager and processes all field updates, financial records, and any required follow-up in RM.
5	Inspection Pending	Community Manager	48-hour SLA clock starts from the move-out date (not from the approval date). Manager completes the **PARAKEET – WF004 – Move Out Inspection** in FastField within 48 hours. If inspection not submitted within 48 hours, A-MO-06 fires an overdue alert to the Manager and Regional.
6	Inspection Complete	QB (automated)	FastField Inspection webhook received: QB Pipeline pushes the inspection PDF/data to SharePoint (confirmed library path – see O-WF004-004). QB updates: `Inspection Status = Complete`; `Inspection SharePoint Link` populated. Inspection is available for reference at the Monday WF003 meeting.
7	Closed	QB (automated)	When both conditions are met – `RM Export Status = Exported` AND `Inspection Status = Complete` – QB sets `Record Status = Closed`. RM team updates Asset Status in RM (TBD or Needs Rehab) → QB reads updated status via sync. Unit becomes eligible for WF003 Monday meeting agenda.

SECTION 03 Stage Detail

3.1 Returned Forms (Stage 2 → Back to Stage 1)

If the Regional Manager returns the Move Out Form in FastField (does not approve), the QB record reverts to `Record Status = Initiated` and a notification is sent to the Community Manager with the Regional's notes. The Manager corrects and resubmits in FastField. See open item O-WF004-005 for the exact return/correction flow confirmation.

3.2 Parallel Track Timing

The Inspection track (Stages 5–6) runs independently of the Approval track (Stages 2–4). The 48-hour inspection SLA clock starts from the **move-out date field on the Move Out Form** – not from the Regional approval timestamp. This means:

Inspection can be completed before approval	If the manager completes the inspection on the day of move-out, it syncs to SharePoint immediately – the approval process runs in parallel and does not block the inspection.
SLA alert fires regardless of approval state	If 48 hours pass from the move-out date and no inspection has been submitted, A-MO-06 fires whether or not the approval process is complete.
Closure requires both tracks complete	A record cannot reach Stage 7 (Closed) until both `RM Export Status = Exported` AND `Inspection Status = Complete`.

3.3 RM Status Update After Export

Justin's team processes the RM import and updates the Asset Status in Rent Manager. QB reads the updated Asset Status as a reference-only lookup. When RM Asset Status = **TBD** or **Needs Rehab**, the unit becomes visible in QB as ready for the next Monday WF003 Disposition Meeting. The field recorder manually adds the unit to the WF003 meeting agenda (per D-030).

> **QB does not write to RM.** All RM record changes – resident status, asset status, financial records, deposit processing – are handled exclusively by Justin's team via the batch CSV import. QB reads RM data for reference only.

SECTION 04 QB Table – Move Out Records

One new QB table. Shared tables (Communities, Lots) remain as built for WF001/WF002/WF003. Move Out Records are the central QB object for WF004 – each record = one move-out event.

4.1 Move Out Records (MO-YYYY-###)

Field	Type	Notes
IDENTIFICATION		
Move Out ID	Auto-generated	Format: MO-YYYY-### (e.g., MO-2026-001). QB primary key.
Community	Relationship → Communities	Cascading dropdown – Community → Lot → Asset. All 68 communities.
Lot	Relationship → Lots	Filtered by selected Community.

Asset ID	Text	RM Asset ID – free text entry from FastField form. Matches RM record for import matching.
RESIDENT		
Resident Name	Text	Full name of departing resident. From FastField Move Out Form.
Move-Out Date	Date	Confirmed vacancy date. 48-hr inspection SLA clock starts from this date.
Notice Date	Date	Date written notice was received or lease end date confirmed. Optional for Eviction trigger.
Move-Out Reason	Dropdown	Values: Voluntary Notice / Lease Non-Renewal / Eviction Outcome
Forwarding Address	Text	Resident forwarding address. Optional field. Passed to RM in batch export.
Resident Notes	Text (long)	Manager's notes – condition concerns, key handover, access issues. Optional.
APPROVAL		
Form Submitted By	Text	FastField user name. Pre-populated from FastField account on submission.
Form Submitted Date	Date/Time	Auto-populated from FastField webhook timestamp.
Regional Approval Status	Dropdown	Values: Pending / Approved / Returned. Set via FastField webhook. Default = Pending on record creation.
Regional Approver	Text	FastField Regional Manager name. Auto-populated from webhook on approval or return.
Regional Approval Date	Date/Time	Timestamp of Regional approval or return action. From FastField webhook.
Regional Notes	Text (long)	Regional Manager's notes or reason for return. From FastField webhook. Read-only in QB.
RM EXPORT		
RM Export Status	Dropdown	Values: Not Queued / Queued / Exported. Set by automations. Default = Not Queued.
RM Export Date	Date/Time	Timestamp when the batch CSV was generated and sent. Set by A-MO-04.
RM Export Batch ID	Text	Batch identifier – date-stamped (e.g., BATCH-20260819). Ties this record to a specific CSV export for audit trail.
INSPECTION		
Inspection Status	Dropdown	Values: Not Started / Pending / Complete / Overdue. Set by automations A-MO-03 and A-MO-05/A-MO-06.
Inspection Date	Date	Date inspection was completed. From FastField webhook on submission.
Inspector Name	Text	FastField user name of inspector. From webhook.
Inspection SharePoint Link	URL	Direct link to the inspection PDF/record stored in SharePoint. Populated by A-MO-05. Read-only; used for quick access during WF003 Monday meeting.
RM REFERENCE (READ-ONLY)		

Asset Status (RM)	Lookup – RM	Current Asset Status from Rent Manager. Read-only in QB. When = TBD or Needs Rehab, unit is eligible for WF003 meeting agenda.
Security Deposit (RM)	Currency – Lookup – RM	Deposit amount from RM for reference. Read-only – all deposit processing remains in RM. Display only; no QB editing.
STATUS & CALCULATED		
Record Status	Dropdown	Values: Initiated / Pending Regional Approval / Approved / RM Export Sent / Closed. Master status field driving workflow stage display.
Days Since Move-Out	Duration (calculated)	Today - Move-Out Date. Drives A-MO-06 inspection SLA alert at >2 calendar days without inspection.
WF003 Ready	Checkbox (calculated)	True when: Asset Status (RM) = TBD or Needs Rehab AND Record Status = Closed. Surfaces unit in "Units Pending WF003 Review" report.

SECTION 05 FastField Forms

WF004 uses two FastField forms – both named under the Parakeet FastField naming convention. Neither form requires QB login; managers complete everything in FastField. QB receives data via webhooks.

5A. PARAKEET – WF004 – Move Out Form

Replaces: JotForm #13 (Move In / Move Out Request). Completed by Community Manager. Routes to Regional Manager for approval within FastField. Submitted data syncs to QB via webhook to create the Move Out Record.

Field	Type	Notes
SECTION A – PROPERTY		
Community	Dropdown	All 68 community short names. Cascading parent for Lot.
Lot Number	Dropdown	Filtered by selected Community.
Asset ID	Text	RM Asset ID – matches RM record for batch import key. Required.
SECTION B – RESIDENT		
Resident Name	Text	Full name of departing resident. Required.
Move-Out Date	Date	Confirmed vacancy date. Required. 48-hr inspection SLA starts here.
Notice Date	Date	Date written notice was received or lease end confirmed. Optional for Eviction.
Move-Out Reason	Dropdown	Values: Voluntary Notice / Lease Non-Renewal / Eviction Outcome. Required.
Forwarding Address	Text (long)	Resident's forwarding address. Optional.
SECTION C – NOTES		
Condition Notes	Text (long)	Manager's preliminary notes on unit condition at time of vacancy. Optional. Not the formal inspection.

Additional Notes	Text (long)	Any other relevant context (keys returned, access issues, occupant disputes). Optional.
SECTION D – SUBMISSION		
Manager Name	Text	Pre-populated from FastField user account. Read-only.
Manager Signature	Signature	Required before submission.
Date Submitted	Date	Auto-populated on submission. Read-only.

Regional Approval in FastField: On submission, FastField routes the form to the Regional Manager's FastField queue. Regional reviews the submitted data, adds notes if needed, and approves or returns. No QB login required by Regional Manager. The approval/return action fires a webhook back to QB. See O-WF004-003 for FastField multi-step routing confirmation.

5B. PARAKEET – WF004 – Move Out Inspection

Replaces: JotForm #9 (Move Out Inspection). Completed by Community Manager within 48 hours of the move-out date. Submitted form is pushed to SharePoint (not QB). QB stores a link to the SharePoint file. The inspection is referenced during the Monday WF003 Asset Disposition meeting.

Open Item O-WF004-002: The actual Move Out Inspection checklist items have not yet been provided by the team. The structure below reflects the form architecture; checklist content is pending team input before the FastField form can be built.

Field	Type	Notes
SECTION A – IDENTIFICATION (Pre-populated from Move Out Record)		
Community	Text (read-only)	Pre-populated from linked Move Out Record.
Lot Number	Text (read-only)	Pre-populated from linked Move Out Record.
Asset ID	Text (read-only)	Pre-populated from linked Move Out Record.
Move-Out Date	Date (read-only)	Reference – pre-populated from Move Out Record.
Move Out Record ID	Text (read-only)	MO-YYYY-### – links this inspection to its parent Move Out Record in QB.
SECTION B – INSPECTION CHECKLIST (Items TBD – O-WF004-002)		
Checklist Items	Pass / Fail / N/A + Photo + Notes	**Pending team input.** Each item = Pass/Fail/N/A dropdown + optional photo capture + optional notes field. Sections expected: Interior · Exterior · Doors & Windows · Appliances · Plumbing · Utilities. Actual items to replace JotForm #9 content.
SECTION C – OVERALL CONDITION		
Overall Condition	Dropdown	Values: Good / Fair / Poor. Manager's summary assessment.
Damage Notes	Text (long)	Summary of any notable damage or issues requiring attention. Optional.
Photos – General	Photo (multiple)	General photos of unit condition beyond checklist-specific photos.
SECTION D – SUBMISSION		
Inspector Name	Text (read-only)	Pre-populated from FastField user account.
Inspector Signature	Signature	Required before submission.
Inspection Date	Date	Auto-populated on submission.

SECTION 06 SharePoint Integration

Move Out Inspections are stored in SharePoint — not in QB — for central access, retention policy management, and reference during the weekly WF003 Monday meeting.

6.1 Storage Architecture

Destination	SharePoint document library. Path TBD — see O-WF004-004. Expected structure: *Parakeet Communities → Operations → Move Out Inspections → [Year] → [Community Name] → MO-YYYY-###_[Community]_[Lot]_Inspection.pdf*
Trigger	FastField Move Out Inspection submission fires webhook → QB Pipeline (A-MO-05) receives payload → pushes inspection PDF + metadata to SharePoint → QB stores the direct SharePoint link on the Move Out Record.
QB Role	QB stores only the `Inspection SharePoint Link` (URL field). All file bytes live in SharePoint. QB does not duplicate the file.
WF003 Access	During Monday meeting, the field recorder opens the SharePoint link from the WF003 Disposition Item to pull up the inspection for context before the team sets a disposition.
Retention	SharePoint retention policy to be defined by IT/Ops. Not a QB-managed setting.

Build Deliverable: Power Automate flow or QB Pipeline step to receive FastField webhook payload and push inspection files to SharePoint. IT / QB Admin to configure. Exact SharePoint path confirmed in O-WF004-004.

SECTION 07 RM Batch Export

WF004's primary output to Rent Manager is a daily CSV batch export of all approved move-outs from that day. Justin's team imports this CSV into RM to process all required field updates.

7.1 Export Logic

Schedule	Daily at 6:00 PM ET, every day (including weekends — move-outs occur any day)
Included Records	All Move Out Records where `Regional Approval Status = Approved` AND `RM Export Status = Queued` as of 6:00 PM ET
Format	CSV — column spec TBD (O-WF004-001). Expected columns: Asset ID, Community, Lot, Resident Name, Move-Out Date, Move-Out Reason, Forwarding Address, Notice Date, Notes, Batch ID
Delivery	Automated email to Justin + RM team distribution. Email subject: "Parakeet Move Out Export — [Date] — [N] Records." CSV attached.
After Send	QB sets `RM Export Status = Exported` and `RM Export Date` on all included records. Sets `RM Export Batch ID = BATCH-YYYYMMDD`.
Empty Batch	If no records are Queued at 6:00 PM ET, no email is sent. No empty CSV generated.
Corrections	Once exported, a record's RM Export status is immutable in QB. Corrections require a new amended Move Out Record with a note referencing the original MO-ID. The RM team handles the correction in RM directly.

Open Item O-WF004-001: Exact CSV column spec and RM import field mapping must be confirmed with Justin / RM Admin before A-MO-04 can be built. This is the critical build-phase dependency for this workflow.

SECTION 08 Automations

WF004 uses seven QB Pipelines automations (A-MO-01 through A-MO-07). Automations A-MO-01 through A-MO-03 handle the approval track; A-MO-04 the RM export; A-MO-05 through A-MO-06 the inspection track; A-MO-07 closes the record.

ID	Name	Trigger	Action
A-MO-01	Move Out Form Received	FastField Move Out Form submitted (webhook)	Creates QB Move Out Record from webhook payload. Sets `Record Status = Pending Regional Approval`; `Regional Approval Status = Pending`; `Inspection Status = Not Started`. Sends notification to Regional Manager: "Move Out form submitted for [Community] Lot [Lot] – [Resident Name]. Review required in FastField."
A-MO-02	Regional Approval Received	FastField approval or return webhook	**If Approved:** Sets `Regional Approval Status = Approved`; `RM Export Status = Queued`; `Record Status = Approved`. Confirms to Manager: "Move Out for [Resident] approved by [Regional Name]." **If Returned:** Sets `Regional Approval Status = Returned`; `Record Status = Initiated`. Notifies Manager: "Move Out form returned by [Regional Name] – [Regional Notes]. Please review and resubmit."
A-MO-03	Inspection SLA Clock Start	Move-Out Date reached (scheduled daily check)	For all records where `Move-Out Date = today` AND `Inspection Status = Not Started`: sets `Inspection Status = Pending`. 48-hour SLA clock now running. Sends reminder to Manager: "Move Out Inspection due within 48 hours for [Community] Lot [Lot]. Please complete in FastField."
A-MO-04	Daily RM Batch Export	Scheduled daily at 6:00 PM ET	Queries all records where `RM Export Status = Queued`. If count > 0: generates CSV export, assigns `RM Export Batch ID = BATCH-YYYYMMDD`, emails CSV to Justin + RM team. Sets `RM Export Status = Exported`; `RM Export Date = today`; `Record Status = RM Export Sent` on all included records. If count = 0: no action.
A-MO-05	Inspection Submission Received	FastField Move Out Inspection submitted (webhook)	Receives webhook payload. Identifies parent Move Out Record via Move Out Record ID field. Pushes inspection file to SharePoint (confirmed path – O-WF004-004). Updates QB: `Inspection Status = Complete`; `Inspection Date`; `Inspector Name`; `Inspection SharePoint Link`. Triggers A-MO-07 check.
A-MO-06	Inspection Overdue Alert	Scheduled daily at 8:00 AM ET	Queries all records where `Inspection Status = Pending` AND `Days Since Move-Out > 2`. Sends alert to Community Manager AND Regional Manager: "Move Out Inspection overdue for [Community] Lot [Lot] – [N] days since move-out. Please complete in FastField immediately."

A-MO-07	Record Closure	Inspection Status changes to Complete (triggered by A-MO-05)	Checks if `RM Export Status = Exported`. If yes: sets `Record Status = Closed`. If no (RM export not yet sent – inspection completed before end-of-day export): record remains at current status and A-MO-07 re-evaluates after A-MO-04 fires that evening.

SECTION 09 Gate Rules

ID	Rule Name	Applies At	Condition & Error
G-MO-01	Approval Required for Export	RM Export batch generation (A-MO-04)	**Condition:** `Regional Approval Status` ≠ Approved. **Rule:** Only records with `Regional Approval Status = Approved` are included in the daily RM CSV export. Pending and Returned records are never exported – they are silently skipped. No error shown; records simply remain in Queued state until approved.
G-MO-02	Both Tracks Required for Closure	Record Status → Closed (A-MO-07)	**Condition:** `RM Export Status` ≠ Exported OR `Inspection Status` ≠ Complete. **Rule:** QB will not set `Record Status = Closed` until both the RM Export and the Inspection are complete. Record remains open and visible in reports until both conditions are met.
G-MO-03	Inspection Requires Parent Record	FastField Inspection form submission	**Condition:** Move Out Record ID field on Inspection form is blank or does not match an existing QB Move Out Record. **Error:** "Inspection cannot be processed – no matching Move Out Record found. Ensure the Move Out Form has been submitted and the Record ID is entered correctly."
G-MO-04	Export Record Immutability	Any edit to an Exported Move Out Record in QB	**Condition:** User attempts to edit a Move Out Record where `RM Export Status = Exported`. **Rule:** Key fields (Asset ID, Resident Name, Move-Out Date, Move-Out Reason, Forwarding Address) are locked to read-only after export. A note field remains editable for amendments. Corrections require a new Move Out Record referencing the original MO-ID.

SECTION 10 Reports

Report Name	Primary User	Description
Today's Pending Approvals	Regional Manager	All Move Out Records where `Regional Approval Status = Pending`. Shows Community, Lot, Resident, Move-Out Date, Reason, Days Since Submission. Sorted by submission date ascending (oldest first).
Today's RM Export Queue	Justin / RM Team	All records where `RM Export Status = Queued` as of now. Previews what will be in tonight's 6 PM batch. Fields: Community, Lot, Asset ID, Resident, Move-Out Date, Reason, Forwarding Address.
Overdue Inspections	Regional Manager · Ops	All records where `Inspection Status = Pending` AND `Days Since Move-Out > 2`. Shows Community, Manager, Move-Out Date, Days Overdue. Sorted by days overdue descending.
Move Out History by Community	Asset Management · Ops	All Closed Move Out Records, filterable by Community and date range. Shows Move-Out Reason breakdown, average days to close, inspection completion rate.
Units Pending WF003 Review	Asset Management	All Move Out Records where `WF003 Ready = Yes` (Asset Status = TBD or Needs Rehab AND Record Status = Closed) and not yet on a WF003 Disposition Meeting agenda. Feed for the Monday meeting recorder.

SECTION 11 Workflow Connections

Connected Workflow	Direction	Connection Point
WF003 – Asset Disposition Review	WF004 → WF003	After move-out is processed in RM, Justin's team sets Asset Status = TBD or Needs Rehab. QB detects this (read-only RM sync) and flags the unit as WF003 Ready. Field recorder adds unit manually to the next Monday WF003 meeting agenda. Move Out Inspection link on the Move Out Record is opened for context during the meeting.
WF002 – Rehab	WF003 → WF002	Indirect connection. WF004 feeds WF003; WF003 feeds WF002 when the Monday meeting disposition = Rehab. WF004 has no direct connection to WF002.
WF005 – Move In (future)	Downstream	Not yet designed. When WF005 is built, it will reference the same Lot/Asset after the unit clears WF002 (or is turned for sale). No direct WF004 → WF005 trigger at this stage.
Rent Manager	WF004 → RM	One-way: QB batch CSV export → Justin imports into RM. RM then writes back Asset Status (read by QB for WF003 feed). Security deposit and all financial processing stays exclusively in RM.

SECTION 12 Open Items

ID	Description	Owner	Target	Notes
OPEN O-WF004-001	RM Batch Import Column Spec	Justin / RM Admin	TBD	The exact CSV column names, data types, and RM field mapping for the daily batch import must be defined before A-MO-04 can be built. Critical path item – no RM update automation is possible without this spec. Build deliverable: CSV template + RM import field map (Justin / RM Admin).
OPEN O-WF004-002	Move Out Inspection Checklist Items	Ops / Community Mgmt	TBD	The actual inspection checklist items to replace JotForm #9 have not been provided. FastField form cannot be built without the item list. Team to supply the inspection criteria (sections and individual check items) before form build begins.
OPEN O-WF004-003	FastField Multi-Step Approval Routing	FastField Admin	TBD	WF004 requires FastField to route the submitted Move Out Form to the Regional Manager for approval or return within FastField. Confirm that FastField supports multi-step routing (submit → review → approve/return webhook) on the current Parakeet FastField plan. If not supported, the Regional approval step may need to move to a QB notification + QB approval button instead.
OPEN O-WF004-004	SharePoint Destination Path	IT / Ops	TBD	The exact SharePoint library and folder path for Move Out Inspection storage must be confirmed before A-MO-05 can be built. Proposed structure: *Parakeet Communities → Operations → Move Out Inspections → [Year] → [Community]*. IT / Ops to confirm or provide alternate path and confirm permissions for the Power Automate service account.
OPEN O-WF004-005	Returned Form Correction Flow	Austin / Ops	TBD	When Regional returns a Move Out Form, the manager must correct and resubmit. Confirm: Does the manager correct the original FastField submission, or does a new FastField form submission create a new QB record (replacing the original)? If a new submission, how is the original record handled (void/superseded)? Decision needed before A-MO-02 return path is built.

SECTION 13 Version History

Version	Date	Author	Changes
v1.0	08/19/26	Parakeet Communities	Initial release. Established WF004 scope; 3 triggers (voluntary notice, lease non-renewal, eviction outcome) – same path for all; 2 FastField forms (Move Out Form + Move Out Inspection); QB Move Out Records table (21 fields); SharePoint integration for inspection storage; daily 6 PM RM batch CSV export; 7 automations (A-MO-01 through A-MO-07); 4 gate rules (G-MO-01 through G-MO-04); 5 standard reports; workflow connections to WF003, WF002, RM. 5 open items flagged for build phase.
