TBD Reporting Process

TBD Reporting Process
Owner: Natalie Magurne
Last Updated: Jul 3, 2026
Scope: Tracks vacant park-owned homes after resident move-out through system processing, weekly TBD reporting, documentation completion, file storage in the Park Owned Asset folder, and utility verification/activation as needed.

Infill process begins
Verify utility status: Electric, Water, Sewer/Septic, Gas
Require utility activation/transfer/new meter?
Yes
Complete Utility Request JotForm (if required)
No
End

Move-Out Processing & Utility Reconnect Workflow

Diagram information
This diagram maps the end-to-end move-out process for a resident, covering Community Manager actions (documentation, photos, utility requests), submission to Asset Management, Rent Manager processing, weekly TBD reporting, Regional Team review for documentation completeness, and Maintenance verification of utilities. Key components: Start, Community Manager tasks, Asset Management processing, Operations Admin reporting, Regional Team decision (complete docs?), Maintenance utility verification, and End.

Resident Move-Out and Utility Verification SOP
1. Start the process by confirming the resident has moved out and the home returned.
2. Submit a move-out completion request to Asset Management.
3. Asset Management receives the move-out request.
4. Asset Management processes the resident move-out in Rent Manager.
5. Once the home appears on the TBD list in Rent Manager, Operations Admin pulls the weekly TBD report from Rent Manager.
    5.1. Circulate the weekly TBD report to Regional Team members.
6. Community Manager completes missing documentation: interior photos, exterior photos, and Unit Turn Inspection Sheet.
7. Community Manager uploads photos and the inspection sheet to the property records.
8. If required, Community Manager completes the Utility Request JotForm.
9. Uploaded documentation is used by the Regional Team during review of the TBD report with the property team.
10. Regional Team reviews the TBD report with the property team and assesses if required unit documentation is complete.
    10.1. If documentation is complete: save completed documentation in the Park Owned Asset folder (properly labeled & organized) and proceed to verify utility status.
    10.2. If documentation is not complete: Regional Team follows up with the Community Manager for missing items.
11. After documentation is saved, verify utility status for Electric, Water, Sewer/Septic, and Gas.
12. Determine if utility activation/transfer or a new meter is required.
    12.1. If Yes: Community Manager completes the Utility Request JotForm and Maintenance verifies activation and re-checks status.
    12.2. If No: proceed to End.
13. Maintenance verifies that utility activation has been addressed and re-checks the utility status.
14. End of process when documentation is saved and utilities are verified or no activation is required.
