Utility Activation — Rehabs

Utility Activation — Rehabs
Owner: Natalie Magurne
Last Updated: Jul 11, 2026
Scope: Covers the end-to-end utility activation workflow for rehab homes from rehab approval/scheduling (or vendor need) through utilities verified live, Rent Manager updated, and teams notified.

Diagram key
- ⬭ Terminator
- ▭ Process
- ◆ Decision

Operations
Start
Confirm utility requirements (electric, water, sewer/septic, gas) and providers
Check meter status
New meter install required?
No
Yes
Flag "new meter install required" on Utility Form and submit immediately
Submit Utility Form (property/unit, providers/services, meter status, target activation date, flags)
Physically verify utilities are live on-site before vendor work (electric live, water running, sewer/septic)
Are all required utilities live on-site?
No
Do not start vendor work; log in Rent Manager Issues; notify Accounting and Regional
Yes
Keep utilities ON throughout rehab; monitor for interruptions
Was service interrupted mid-rehab?
No
Yes
Notify Accounting for restoration; log in Rent Manager Issues; pause vendor work if needed
Notify Sales: home ready for showings
End
Accounting
Receive Utility Form
Contact utility providers on behalf of Parakeet
Open/transfer accounts in Parakeet's name
Confirm & document account #, service start date, deposit requirements
if new meter flagged
Coordinate meter install with provider; notify Operations of install date / lead-time
Schedule activations so utilities are ON before vendor work
Notify Operations once accounts open and activation is confirmed
Track Utility Form submissions; verify Rent Manager entries against tracking log
Escalate to provider for delayed activation / emergencies (anytime Operations reports a failure)
Sales
Coordinate showing timing; confirm utilities are live before showings

Utility Activation & Monitoring Workflow

Diagram information

This diagram maps the end-to-end process for confirming, activating, monitoring, and documenting utilities for property rehabilitations and showings. It shows Operations, Accounting, and Sales responsibilities: confirming requirements, checking meter status, submitting and processing Utility JotForm, coordinating new meter installs and activations, physically verifying utilities before vendor work, handling interruptions, notifying stakeholders, and closing the process.

Utility Activation and Monitoring SOP

1. Start the process at project initiation.
2. Confirm required utilities and providers (electric, water, sewer/septic, gas).
3. Check the meter status for the property/unit.
4. Determine if a new meter install is required.
    4.1. If yes, flag "new meter install required" on the Utility JotForm and submit immediately.
    4.2. If no, proceed to submit the Utility JotForm with property/unit, providers/services, meter status, target activation date, and flags.
5. Accounting receives the Utility JotForm.
6. Accounting contacts utility providers on behalf of the company.
7. Accounting opens/transfers accounts in the company name.
8. Accounting confirms and documents account numbers, service start dates, and deposit requirements.
9. If a new meter was flagged, Accounting coordinates meter installation with the provider and notifies Operations of install date and lead time.
10. Accounting schedules activations so utilities will be ON before vendor work begins.
11. Accounting notifies Operations once accounts are open and activation is confirmed.
12. Operations physically verifies utilities are live on-site before vendor work (electric live, water running, sewer/septic).
13. If utilities are not live, Operations does not start vendor work; they log the issue in Rent Manager Issues and notify Accounting and Regional.
14. If utilities are live, Operations keeps utilities ON throughout rehab and monitors for interruptions.
15. If service is interrupted mid-rehab, Operations notifies Accounting for restoration, logs the incident in Rent Manager Issues, and pauses vendor work if needed.
16. Accounting escalates to the provider for delayed activation or emergencies when Operations reports a failure.
17. After utilities remain uninterrupted and work completes, Operations updates Rent Manager with utility status and issues.
18. Operations notifies Sales that the home is ready for showings.
19. Sales coordinates showing timing and confirms utilities are live before showings.
20. Sales tracks Utility JotForm submissions and verifies Rent Manager entries against the tracking log.
21. If Regional awareness or sign-off is required, Operations notifies Regional for awareness/sign-off.
22. End the process after all notifications and documentation are complete.
