Type something

Steps prior to:

STEP 1 · INFILL NEED IDENTIFIED

Owner: Asset Management

Asset Management identifies the need for a new infill home based on one of the following: occupied lot turnover, vacant lot, or demo lot.
Asset Management creates a MRB (Make Ready Board) issue in Rent Manager for the new infill home.
For vacant lot or demo lot infill, Asset Management opens the MRB issue for Construction review and determines next steps before any home selection begins.
Asset Management notifies Sales that an infill need has been identified — this is the trigger for Sales to begin driving the process.

STEP 2 · VACANT LOT CONFIRMATION & DUE DILIGENCE

Owner: Operations / Construction

Before any home is selected, the intended lot must be reviewed and confirmed as suitable for placement.

Operations — Lot Readiness Review

Confirm the lot is the correct lot for infill.
Confirm electrical information for the lot.
Confirm water and sewer availability.
Confirm whether a site survey has already been completed and uploaded to Rent Manager.

Construction — Due Diligence & Survey

If no site survey exists, order a survey for the site.
Upload the survey to Rent Manager once complete.
Enter all required due diligence information into the UDF fields in Rent Manager: buildable envelope, door swing, electrical details, water/sewer details, and any additional placement notes (e.g., tree removals).

New Home Order & Invoicing

New Home Order & Invoicing
Owner: Natalie Magurne
Last Updated: Jun 23, 2026
Scope: This process covers ordering a new home from a manufacturer through invoice approval, RM export/import handling, asset record updates, and downstream operational setup, ending once required records are updated and utility accounts are opened.

New Home Order-to-Asset Onboarding Flow

Diagram information

This diagram maps the cross-functional process from Sales submitting a new home order through Finance, RM (Risk Management)/Imports, and Property/Operations to create and update asset records and open utility accounts. Key steps: Sales submits order and signs quote; Finance reviews/approves and sends to Cavco; RM imports/updates serial numbers and flags missing serials; Property/Operations creates/updates asset records and opens utilities. Decision points handle availability of serial numbers and clarification loop for questions.

New Home Order-to-Asset Onboarding SOP

1. Start the process when Sales receives a new home order request.
2. Sales: Submit New Home Order Request to Manufacturer.
3. Sales: Receive Quote & Specs from Manufacturer.
4. Sales: Sign Quote/Estimate and return to Manufacturer; copy RM and Finance on the return.
5. Sales: Send invoice to finance@.
6. Finance: Review and approve invoice.
    6.1. If approved, send import information to RM team.
    6.2. Send required paperwork to Cavco as applicable.
7. RM Team: Review RM exports.
8. RM Team: Import dates weekly.
9. RM Team: Check if Serial Number is available.
    9.1. If Yes, proceed to Property/Operations to create asset record.
    9.2. If No, request Serial Number / resolve missing serial and return to step 9.
10. Property/Operations: Receive questions/notifications and provide clarifications as needed, then loop back to RM serial number check if required.
11. Property/Operations: Create Asset Record once serial is available.
12. Property/Operations: Update Asset Record with import/serial and other details.
13. Property/Operations: Earmark floorplan line (coordinate with Finance/RM as needed).
14. Property/Operations: Open Utility Accounts for the new asset.
15. End the process after utility accounts are opened and asset record is finalized.
